

JOUR 4251

Psychology of Advertising

3.2 Memory

Make sure to get an In-Class Assignment form before class starts and write down your name on the form.

Recap Tuesday

- Focal attention
 - Categorization
 - Representativeness heuristic
 - Pioneering advantage
 - Assimilation / contrast
 - Brand personality
- Comprehension
 - Omit comparisons
 - Pragmatic inferences
 - Affirmation of the consequent
 - Juxtaposition
- Elaboration
 - Self schema
 - Meta-cognition

Memory

What do we remember? Do you remember ads you have seen?

In-Class Assignment: Question 1

Samsung Washer
with activewash™

Memory

RECORD - STORE - RETRIEVE - information from the senses

Encoding

Is getting information from external stimulus into an internal representation that allows us to retain it in the cognitive system

Memory

Storage means to retain the information over time

PUSHING SAVE on file

Can be short-term; Can be long-term

Retrieval refers to the processes that allow us to find the information stored in memory.

Forgetting is a set of processes that prevent us from finding it.

The Multi-store model of memory

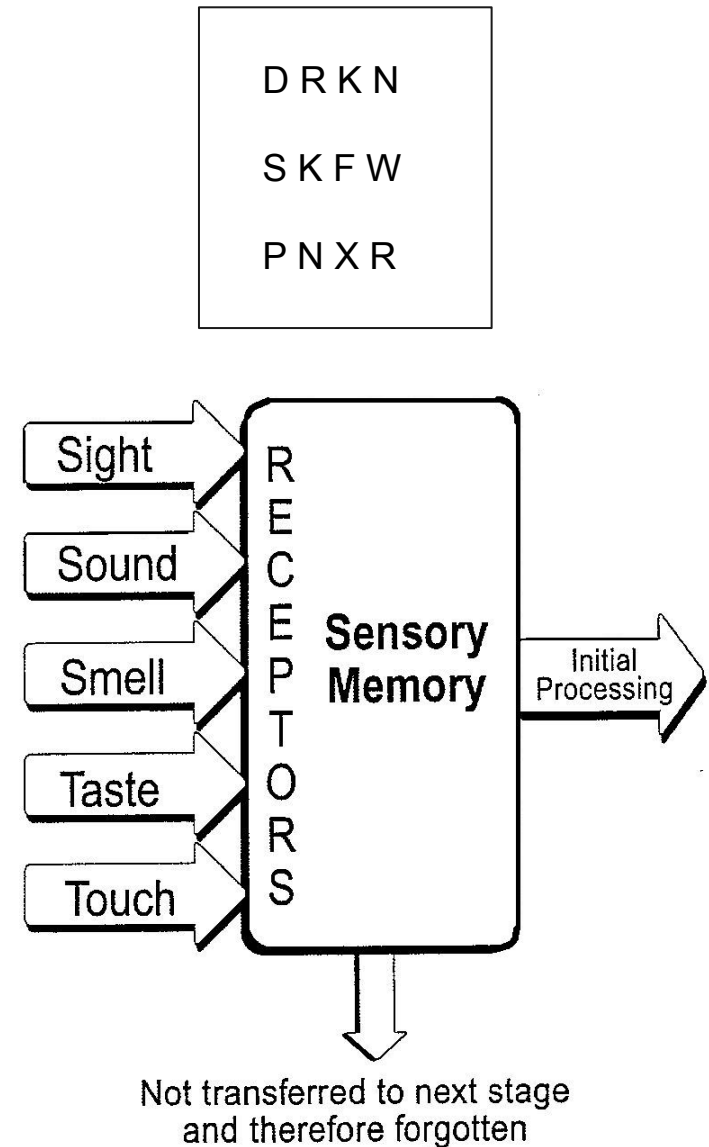

The multi-store model of memory
(Atkinson & Shiffrin, 1968)

Sensory memory

All senses have memory registers

You can retain it for 18-20 seconds before it either goes away or moves into short-term memory

Short-term memory (working memory)

Input from different senses gets integrated with items from long-term memory

Held in conscious awareness

Information can be manipulated

Limited storage ability - it is active and you are consciously aware of it

Verbal rehearsal lengthens the time it stays in short-term and builds up the trace in long-term

Memory test (Question 2)

Memory test (Question 2)

Nine	Swap	Cell	Ring	Key
Plugs	Lamp	Apple	Table	Sway
Army	Bank	Fire	Hold	Worm
Clock	Horse	Color	Baby	Sword
Desk	Keep	Find	Bird	Rock

Memory test (Question 2)

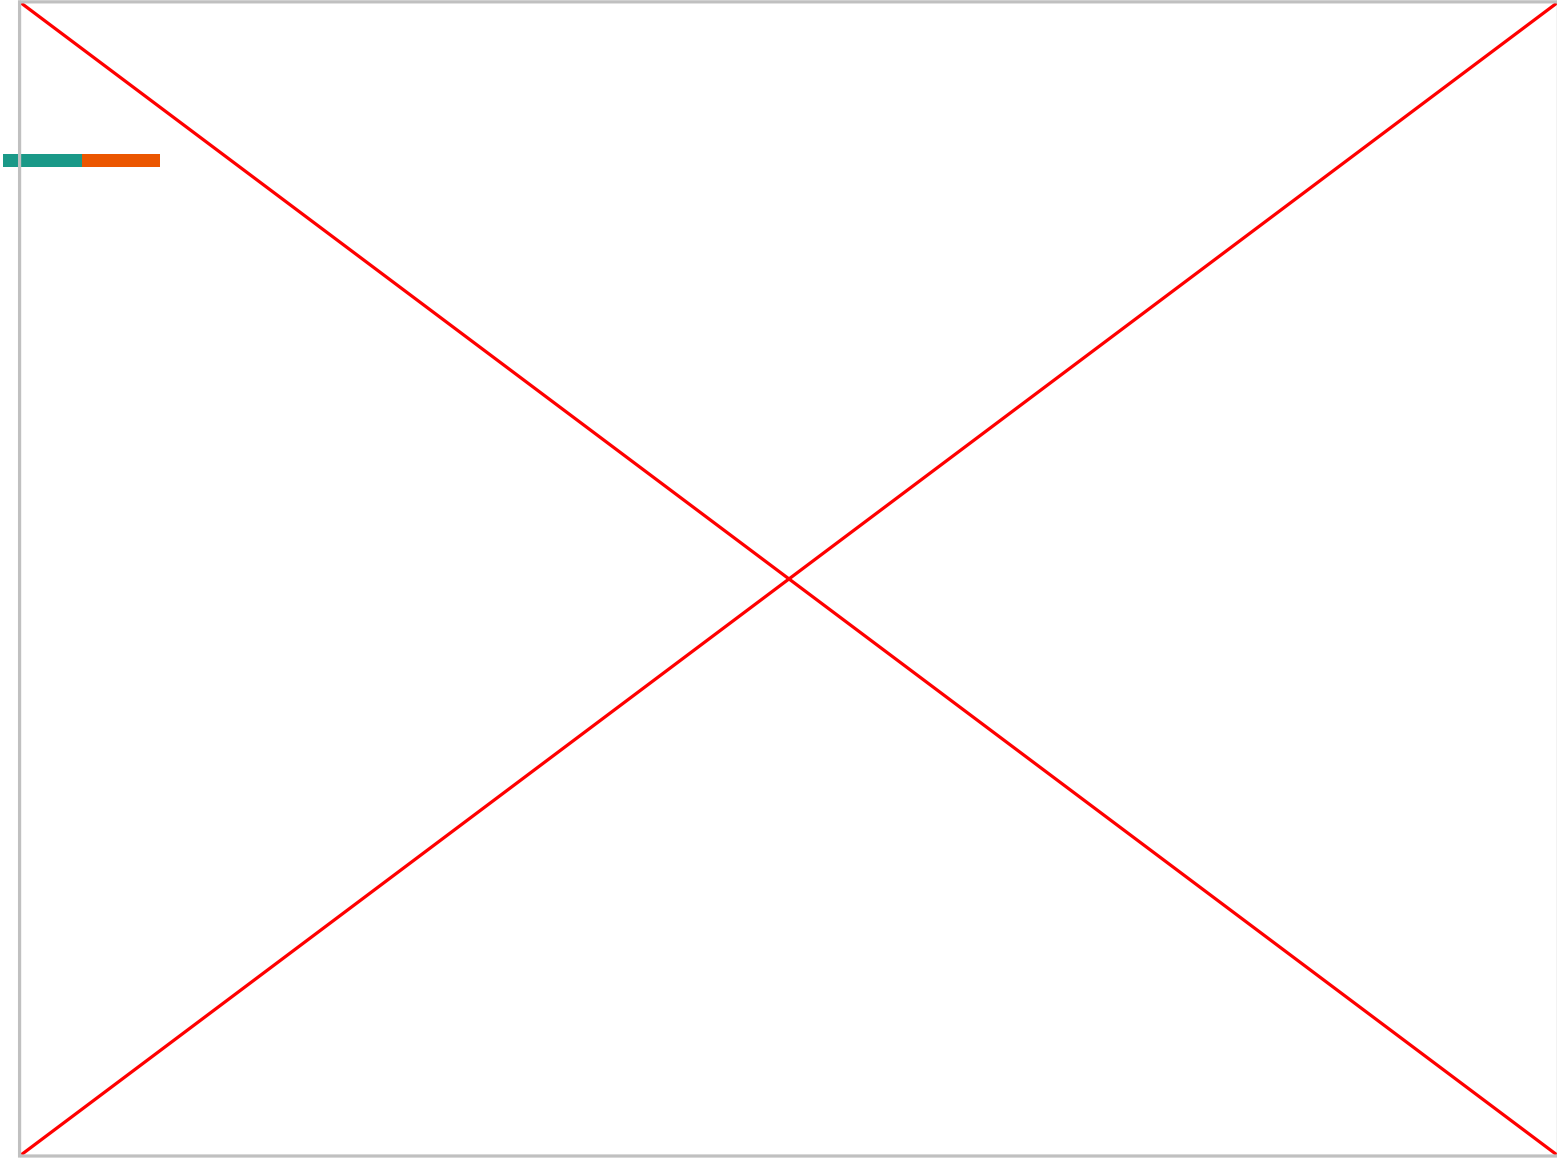

Long-term memory

Unlimited amounts of information

Needs to be encoded semantically or conceptually in order to enter long-term memory

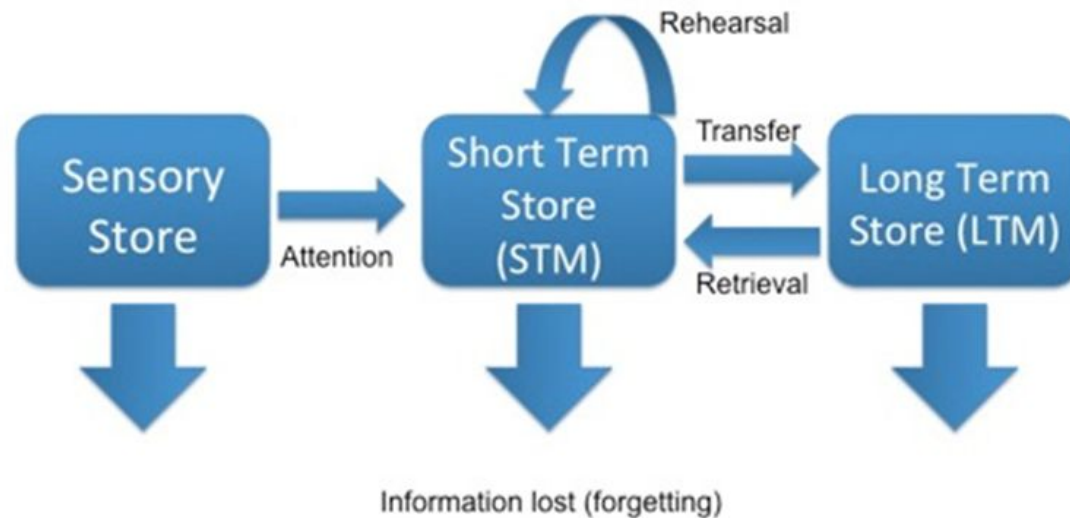

The more you rehearse, the more it is in long-term memory

Controversy

That short-term and long-term are different

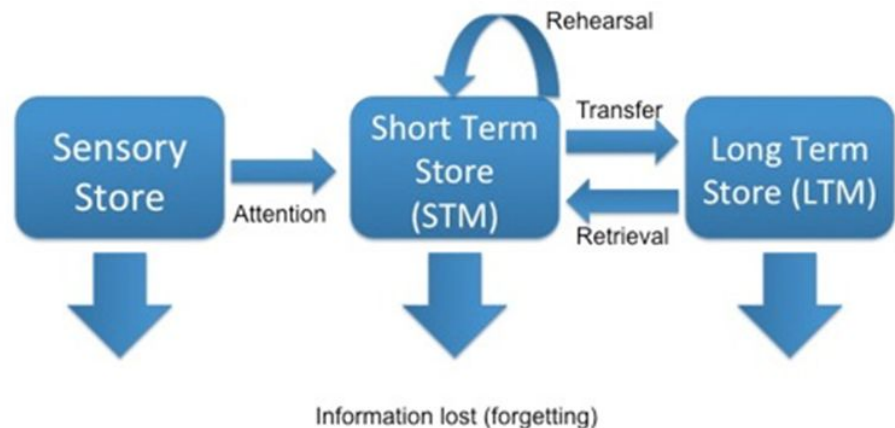

Evidence for multi-storage system

- Speed of retrieval: faster to retrieve from short-term rather than long-term memory
- Capacity: You can't store as much in short-term than in long-term
- Primacy and recency effects: You remember first and last best
- Different forms of storing the information: encoding process
- Amnesia patients

Problems with multi-storage system

1. Always need to go through short-term memory?
2. Sometimes people don't remember something that they have seen thousands of times:

Question 3

Draw from memory:

- The map of the world

OR

- A one dollar bill

Q4: another memory test!

Answer the following questions:

1. What words did we categorize in the previous class?
2. In what colors were “iPhone” and “Red” written in the word cloud?

forest gump
healthy
products
phone
worm
steve jobs
computer
ipod
doctor
red
juice
eat
tree
546426
monopoly
sauce
food
devices
company
expensive
music
mac
product
juicy
core
teacher
banana
fruit
orange
pear

computers

Depth of processing

It is not just about repetition. It is also about the level of processing.

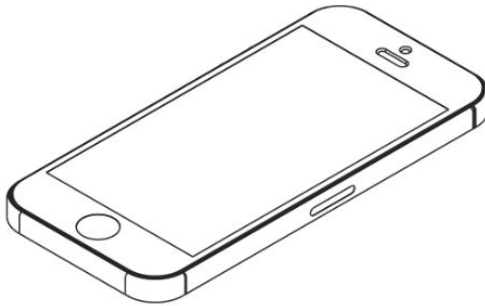

Remembering comes from processing deeply, rather than superficially.

Thus, depending on what you (are asked to) do with the information can affect how deeply you process it.

RIVER: Is the word in capital letters?

HOUSE: Does the word rhyme with mouse?

WINE: Does the word fit in the sentence: "The man drank a glass of...."

What's next?

The following things are due **February 13 (before class starts!)**:

- Submit reading response 3 on Chapter 3 (memory)
- Assignment 2 (attention)
 - Hand in on Canvas: Upload Word/PDF document
- Let us know whether you need a laptop for Exam 1
 - Email your TA
