COLLEGE OF LIBERAL ARTS

What are the implications of the simultaneous usage of multiple media for advertising effectiveness?

Extant research typically examines effects of mono-media consumption. For example, research has tested effects of watching a television show including ads with full attention and without any distractions. However, more and more people are using multiple media at the same time. The implications of this phenomenon are not well understood.

Assistant Professor Claire Segijn seeks to advance understanding of how the use of multiple media influences information processing and advertising effectiveness. Research has shown that people have difficulty processing information when combining tasks. Therefore, it is important to examine factors that could facilitate information processing while using multiple media simultaneously. For example, Segijn examined if it matters what tasks are combined when multiscreening. She found that people remember more of media content and have more positive attitudes toward brands when they combine related tasks - like tweeting about the television show - opposed to unrelated tasks - like chatting about your weekend with friends while watching television.

Segijn also studies how attention is allocated to media messages and subsequently how attention allocation affects information processing and advertising effectiveness. Her primary focus is on visual attention (eyes-on-screen). The work on effects across screens connects with her work on attention such that people are forced to divide their attention when using multiple screens at the same time. Segijn and colleagues' eye-tracker study showed that attention is a key factor when multiscreening.

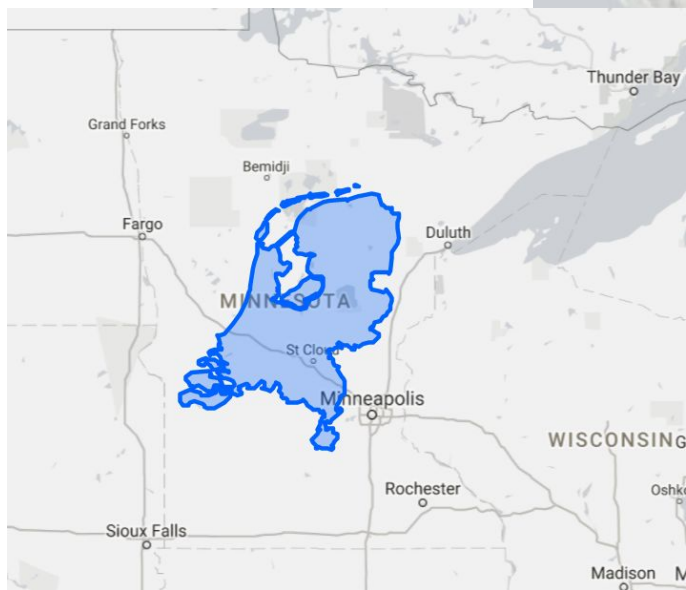

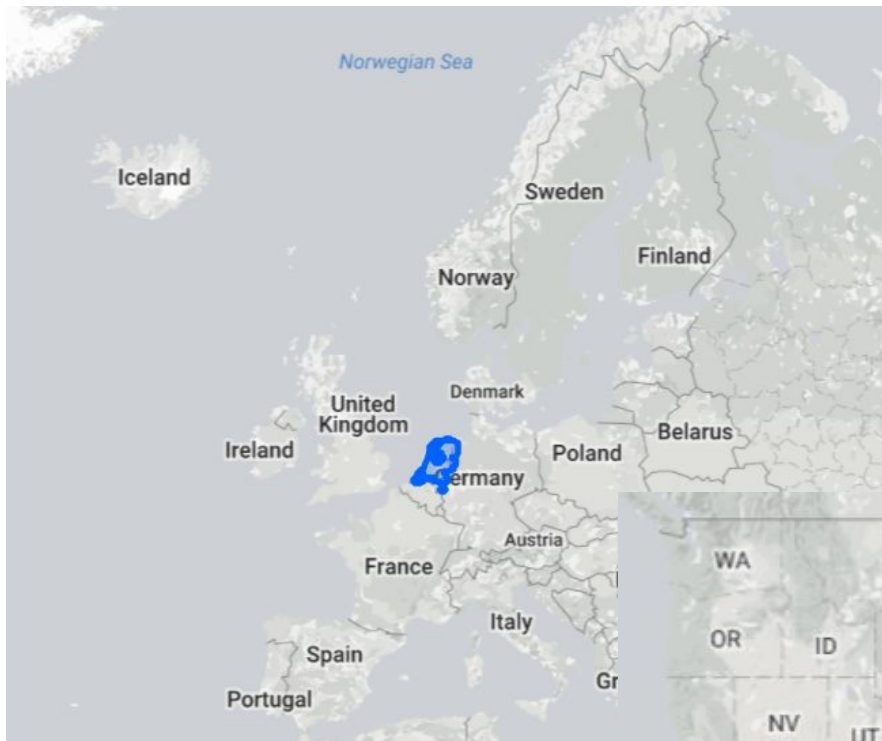

"People switch their attention on average 2.5 times per minute," Segijn said. "Furthermore, the results showed that between multiscreening groups, the amount of attention toward a screen has consequences for how much content people will remember."

JOUR 4251 (001) Psychology of Advertising (Spring 2020)

This course is an introduction to the underlying psychological theories and research that can explain how advertising affects people. The focus is on psychological theories over more socially oriented approaches. The goal of this course is to provide you with an understanding of a range of leading theories that can be used to evaluate the possible effects of advertising and promotional communications.

HOW TO APPLY

EXPLORE OUR MAJORS

The Strategic Communication: Advertising & Public Relations major prepares students for careers in advertising, public relations, and corporate, non-profit, health, and advocacy communications. Students develop the skills essential for advertising and PR careers, including crafting unique messages and campaigns for products, brands and services while using multiple media platforms.

What You Can Study

Students typically choose either an advertising or public relations focus in their program, but both majors involve significant exposure to theories, practices and issues to prepare for today's increasingly integrated professional world.

- Account/Media Planning
- Digital Strategy
- Advertising Strategy
- Media Design
- Communication Management
- Portfolio Development
- Campaign Strategy

Advertising is a form of strategic communication

- ▶ Goal-oriented
- ▶ Long-term focus
- ▶ Proactive, not reactive
- ▶ Integrated into the organization
- ▶ Research and feedback can inform strategy

Brand

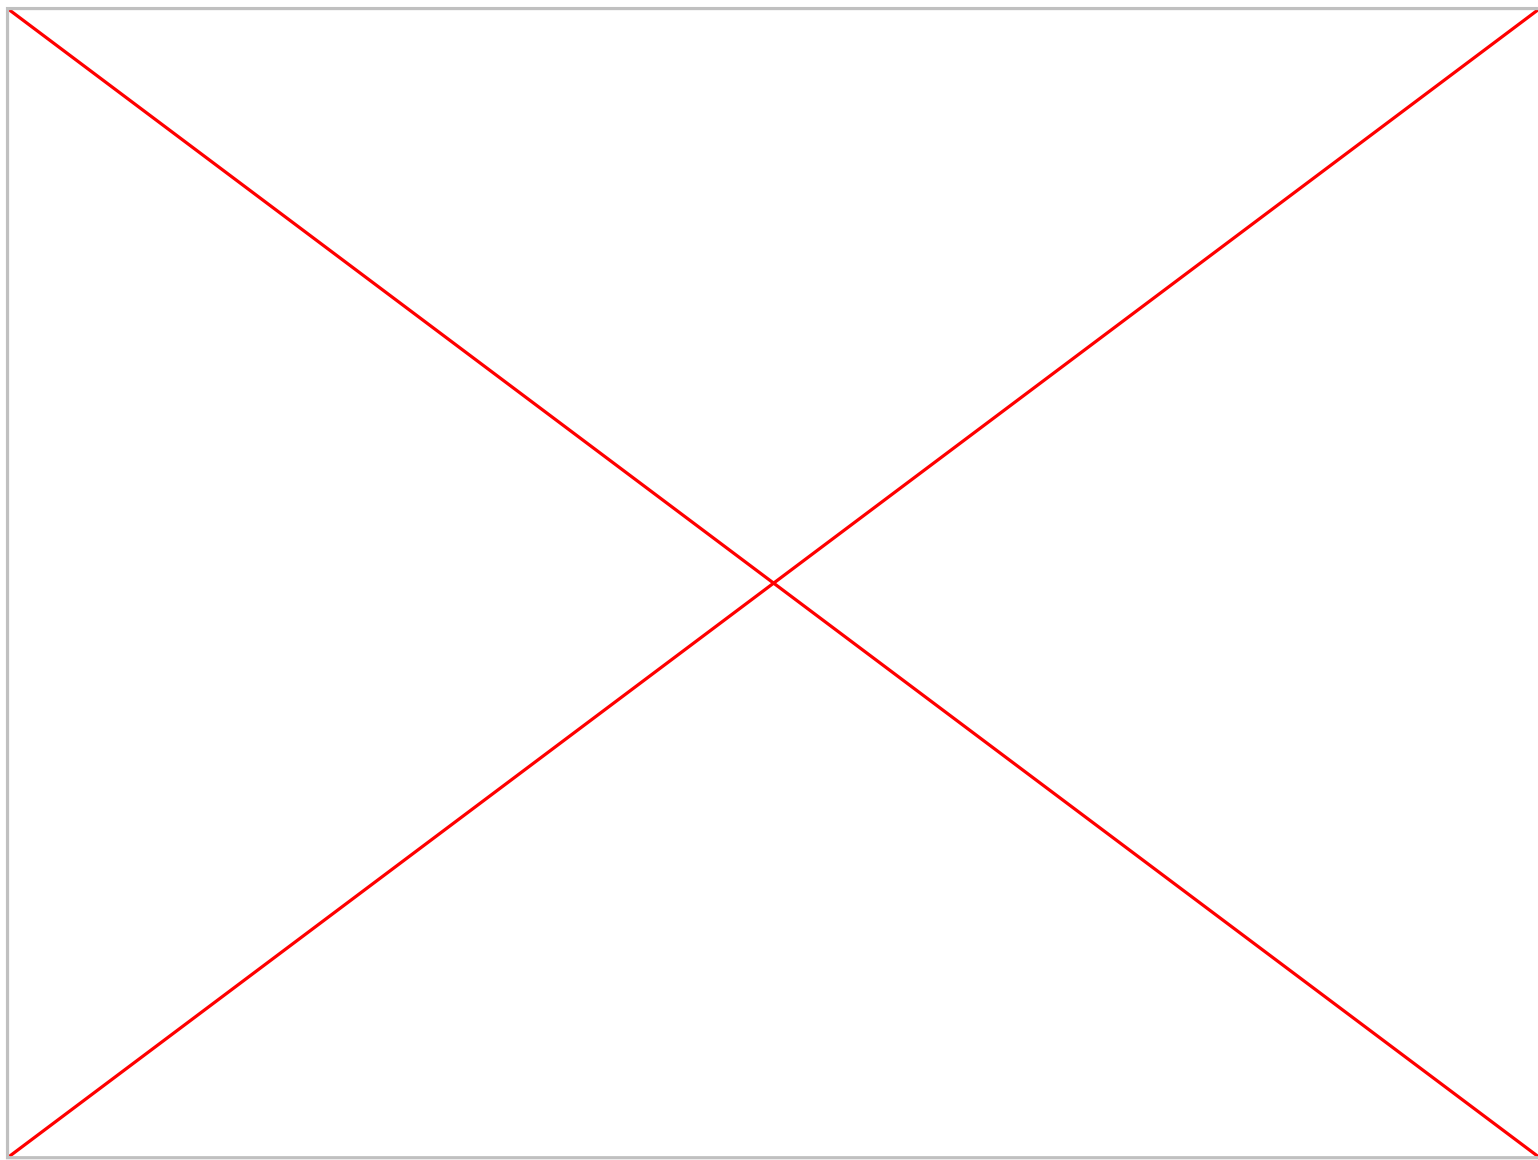

“The label with which to designate an individual product and differentiate it from competitors.” (p. 3)

Unique Selling Proposition
