Advertising and behavior - Ch. 6, part 1

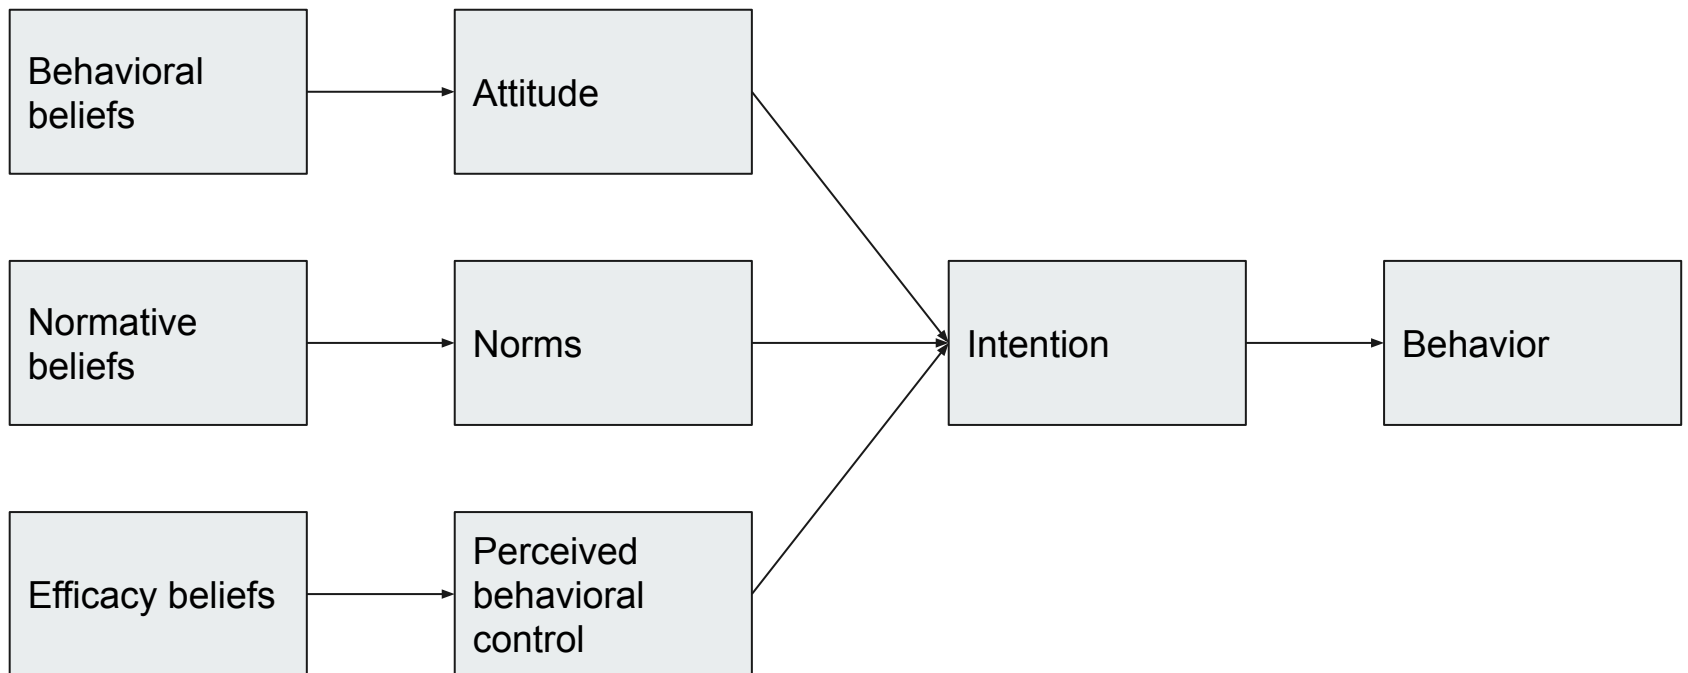

Theory of Planned Behavior

Theory of Planned Behavior

Beliefs

Behavior: Social distancing

Behavioral beliefs - beliefs about the outcome

Positive: “Social distancing will reduce spreading of the virus”

Negative: “I’m not in a risk group, thus, I will not get sick”

Normative beliefs - beliefs about what others might think

Positive: “I believe that my parents want me to do this”

Negative: “Everyone around me think it is okay to still meet up”

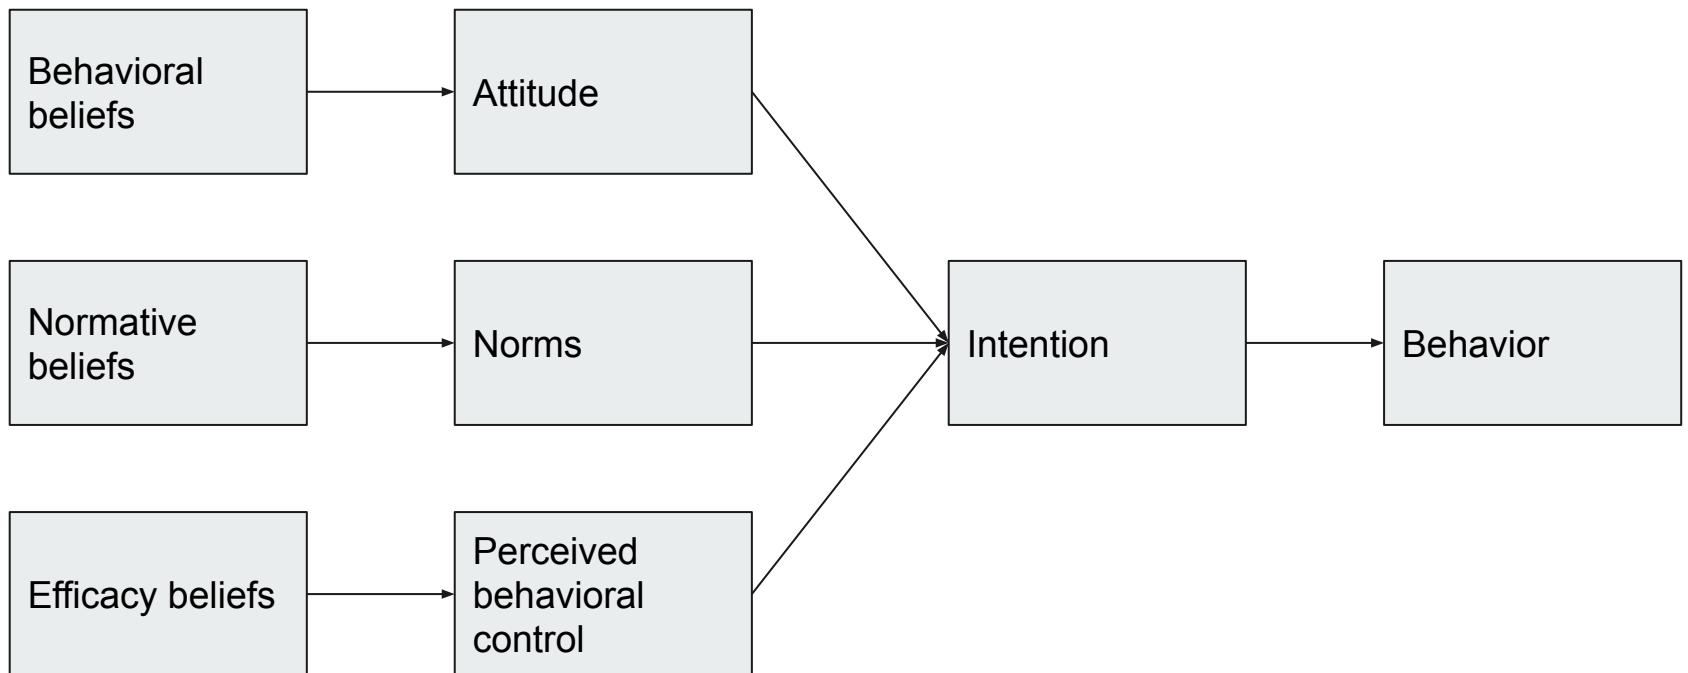

Efficacy beliefs - beliefs about whether people think they can do it

Positive: “I can stay inside most of the time anyway”

Negative: “I don’t know how long 6 feet is”

Theory of Planned Behavior

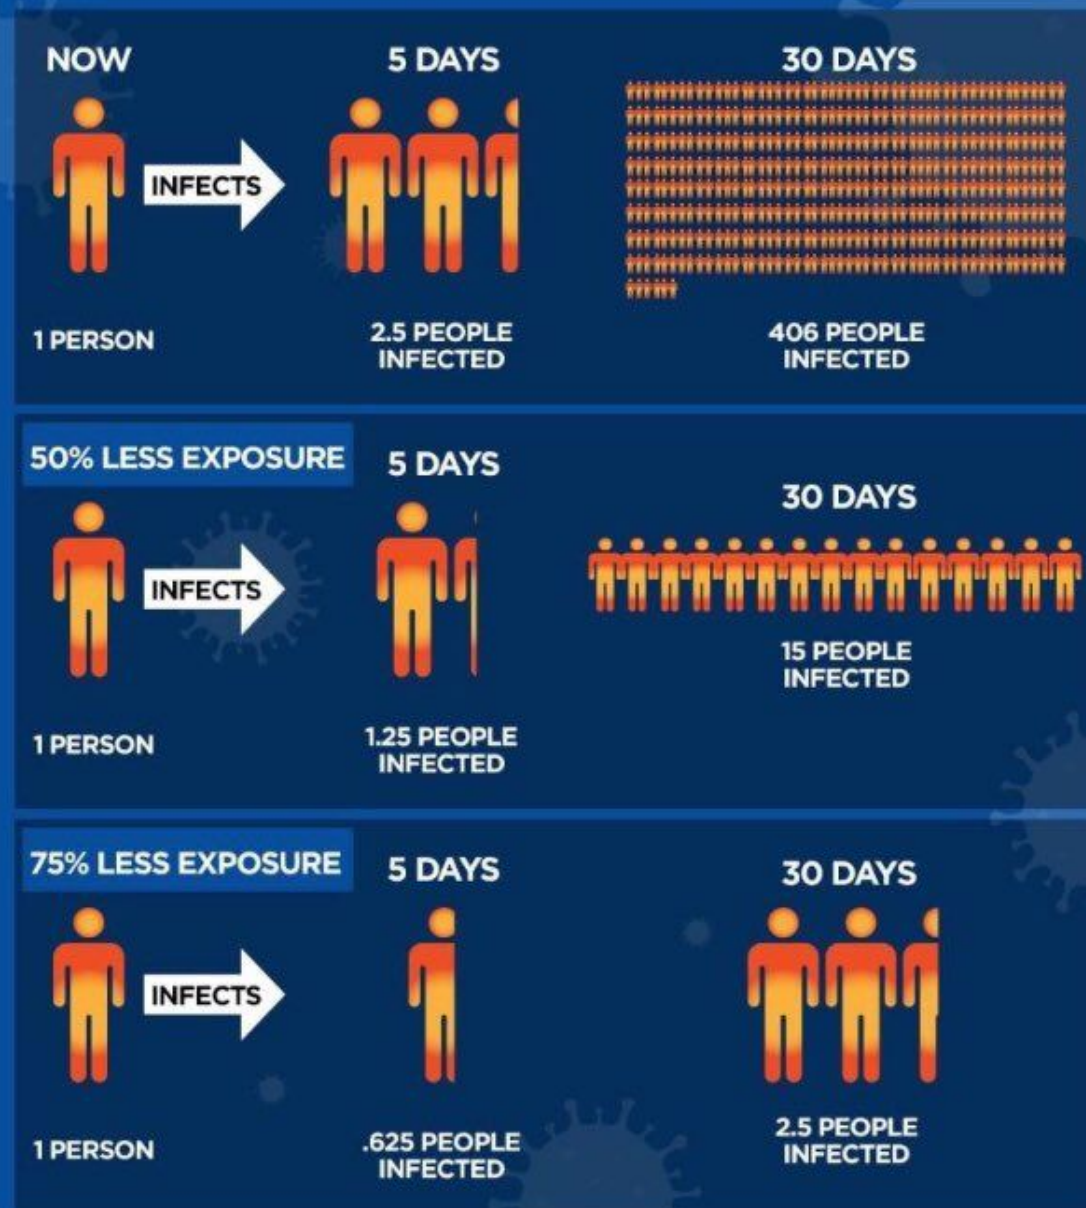

Implications for advertising

1. Determine WHAT behavior you want to influence
2. Determine target group (WHO)
3. Research whether it is **attitudes, subjective norms** or **perceived behavioral control** that matters in purchasing (if purchasing is the goal)
4. Identify the specific **beliefs** that influence the purchasing decision

Think like an advertiser!

- Select a product
- Describe your target audience
- List what you think may be attitudes, subjective norms, and perceived behavioral control that would influence the behavioral intentions to purchase the item
- Create a campaign idea to address one of these factors that you think may be important

What's next?

- Continue reading Chapter 6
 - Submit reading response #7 by Thursday, **March 26**
- No class this Thursday
- Assignment #4 on behavior is due **by April 23**
