Advertising and behavior change - Ch. 6 part 2

Theory of planned behavior

Automatic behavior =
Processes that occur without
intention, awareness, or effort

Explicit (conscious) vs. implicit (non-conscious) attitudes

Dual process theories would suggest that if you are **MOTIVATED** and **ABLE**, you are more likely to be influenced by conscious attitudes

Otherwise, more influenced by non-conscious / implicit attitudes

Example: Branded vs. store-brand product

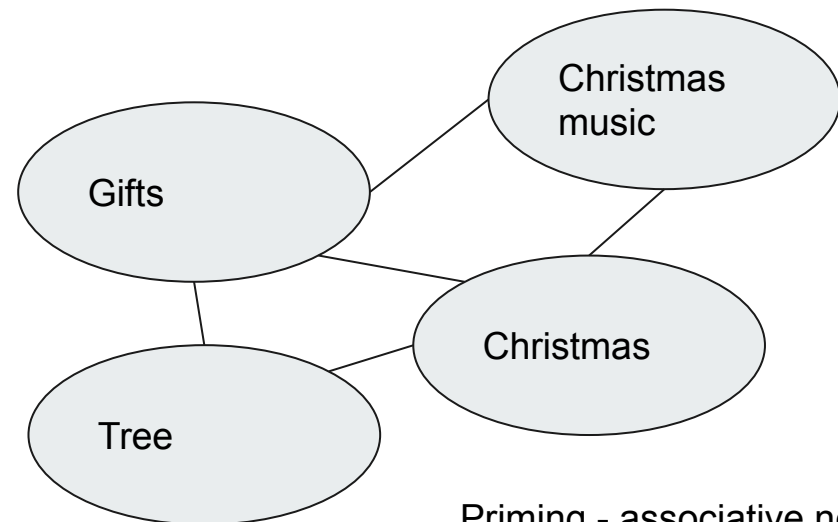

If you have time, you have time to THINK and you may say they are the same, just one is cheaper

If you are rushed, you will just grab the branded named one.

How are we primed in everyday life?

Christmas music in a store in December

Holiday mood? Implicitly remind you that you need to purchase gifts?

Priming - associative network

Subliminal (priming) advertising

Messages below perceptual threshold: you don't see them, but process them

Automaticity - goals

Desired states

+ we haven't reach it, but it is possible to reach

Goals are actions or outcomes towards which individuals hold positive attitudes.

Goals can be unconsciously activated and pursued

Automaticity - goals

Priming goals with brands

Example: Sports drink versus water study

Goals, habits, and behaviors

Habits

Learned sequences of acts that have become automatic responses to specific cues and are functional in obtaining certain goals or end states

Something becomes a habit if performed frequently under stable conditions

Example: Brushing your teeth

Goal dependent automaticity: you have to have the intention to do it, but then once you start, you just know how

Habits -brand loyalty

Intentions are a predictor of behavior.

However, for habitual behavior: past behavior is a better predictor of future behavior

Brand loyalty is hard to change

Marketers:

We LIKE brand loyalty

We HATE it when trying to change behavior

Goal conflict and impulse behavior

Goal conflicts: two or more goals conflict (example: diet + hedonic goal)

Impulse buying: unplanned + without consideration

Often result of goal conflict rooted in a self-control dilemma

Desire vs. willpower

How do you value goals?

You value the long-term goal less in the moment

Ego-depletion

What's next?

- Start reading Chapter 7 (new chapter!)
 - Reading response #8 on this chapter is due **April 2, 2:30 pm**
- Assignment #4 on behavior is due by **April 23, 2:30 pm**
