

JOUR 4251

Personalization (part 1)

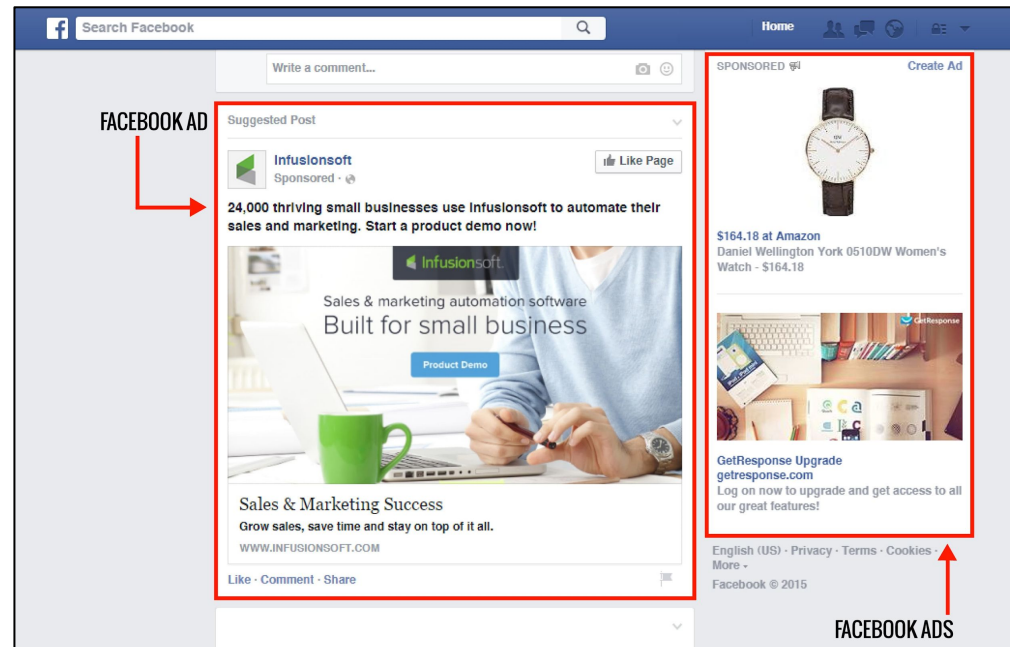

What is personalization in advertising?

The strategic creation, modification, and adaptation of content and distribution to optimize the fit with personal characteristics, interests, preferences, communication styles, and behavior.

Personalization strategies

- Email marketing
- Online behavioral advertising
- Social media advertising
- Apps and notifications
- On-site personalization
 - Recommender systems
- Customization
- Price differentiation

Data is needed!

First party data	Second party data	Third party data
Data owned by companies about their own customers (i.e., survey, website visits).	Any data that gets relayed along the media buying activities.	Data purchased on a massive scale from data management platforms.
<i>Ex. website visit, Facebook interactions</i>	<i>Ex. user device model, location, OS version</i>	<i>Ex. pay publishers to let it collect info about their visitors.</i>

Privacy paradox

Although some people are worried about their privacy, they do not act like it (e.g., they disclose their information instantly and almost unconditionally).

Why?

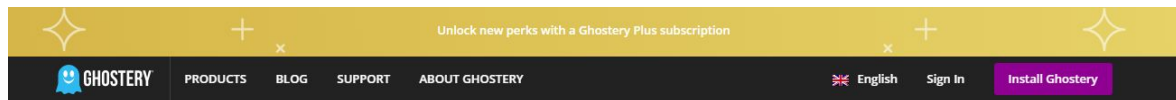

Data is needed!

Deterministic data	Probabilistic data
That you can easily determine based on available data.	That you can infer based on available data.
$2 + 2 = 4$	$2 + x = y$

Want to know what data is collected?

Faster, safer, and smarter browsing

Ghostery helps you browse smarter by giving you control over ads and tracking technologies to speed up page loads, eliminate clutter, and protect your data.

Install Ghostery

Learn More

Smart Blocking
automatically optimizes page performance as you browse.

Dynamic UI
includes multiple displays and detailed tracker dashboard.

Enhanced Anti-Tracking
anonymizes your data to further protect your privacy.

When does it work?

Personalization paradox

Personalization has positive and negative effects.

Privacy calculus theory

Personalization is effective when the benefits outweigh the costs.

Why does it work?

Self-referencing theory

Personalization creates a match between message and recipient.

People like things that are related to themselves.

BUT

When too self-related it can backfire.

- Too creepy
- Increase scrutinization (ELM!)

What's next?

This week:

- Submit reading response #10
 - Articles: Strycharz et al (2019) + Segijn (2019)
 - Deadline: **April 16, 2:30 pm**
- Submit review question by **April 16, 2:30 pm**

Next week:

- Assignment #4
 - We discussed all contents needed for this assignment
 - Deadline: **April 23, 2:30 pm**

Student Rating of Teaching by **May 3**
