

# JOUR 4251

Packaging design

## Packaging: the silent salesperson

- Not used deliberately, but ‘makes sense’ to consumers when it is used correctly
- Are not consciously perceived as persuasive cues
  - Heuristics!

"I recognize  
milk as being  
milk because  
of the colors"

"the colors  
influenced my  
purchase  
behavior"

# Cognition

## Traditional view:

Language and cognition is facilitated by abstract representations of concepts in the brain.

## Embodied cognition:

Thinking occurs in the **whole body**. The senses are an extension of the brain.

- Power and height
- Warmth and personality

# Types of embodiment in design

Anthropomorphism & familiarity

Image schemas & symbolism

Meaningful sensory experiences

Embodiment in movement and action

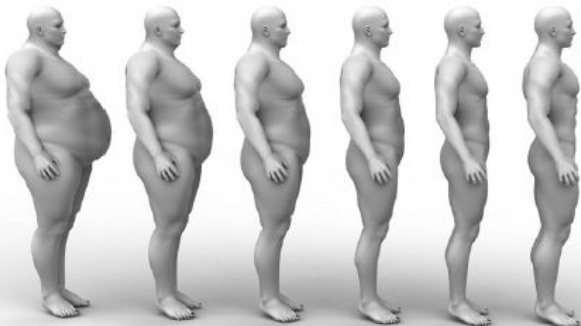

# The influence of shape

## Association between shape and healthiness

Approximate Waist-to-Height Ratios

0.95    0.7    0.6    0.5    0.4    0.35

## Results of study by van Ooijen and colleagues:

- Design (shape) serves as healthiness cue
- Design can make healthy foods more appealing
- It can serve as a cue that facilitates identification on the shelf
- The effect of design is goal-dependent
  - Health-relevant versus hedonic goal

## What's next?

**Due this Thursday (April 23rd):**

- Assignment #4
- Reading response #11

**Next week (April 27 - May 1st):**

- Exam 2
  - Monday 9 am - Friday 5 pm
  - 75 minutes to complete the exam

**Student Rating of Teaching by May 3**
