

JOUR 4251

Psychology of Advertising

2.1 Functions of advertising / introduction to psychology (continued)

TA sections

Weijia Shi (Adamle - Friberg)

Office: Murphy Hall 400

Office hours: Tuesdays + Thursdays, 1:00-2:00 pm

Email: shixx589@umn.edu

Ines Guanchez (Gaffney - McKee)

Office: Murphy Hall 400

Office hours: Mondays + Wednesdays, 2:30-3:30 pm

Email: guanc002@umn.edu

Ida Darmawan (McMeans - Wilkowske)

Office: Murphy Hall 400

Office hours: Tuesdays, noon-2:00 pm

Email: darma002@umn.edu

Questions?

Please contact your TA first following the alphabetical rule above.

Their contact information is on Canvas

Email = short questions or making appointments.

Mention “JOUR 4251” in subject of email.

Office hours = explanations

New students

- Read syllabus
- Check slides
- Catch up with readings
- Ask for notes
- Set up notifications for the announcements in Canvas

Recap Thursday

- Hard-sell versus soft-sell approach
- Alpha vs. omega strategies
- Psychology and experiments
- Message characteristics
 - Message sidedness
 - One sided
 - Two sided
 - Source
 - Direct
 - Indirect

Are ads effective?

Modelling approach

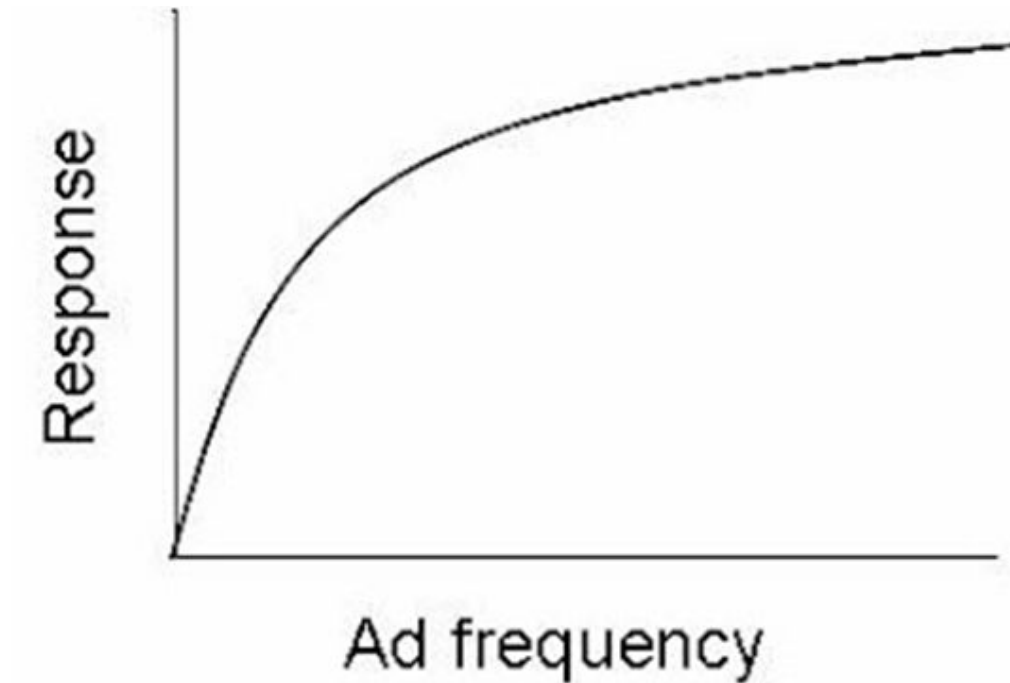

- Sales response models

Behavioral paradigm

- Hierarchy-of-effects models
- Cognitive response models
- Dual process models

Sales response model

Concave: the more you spend, the less your return

Sales response model

S-shape: Takes a certain amount to work, then works well, then drops off

Sales response models

Criticism:

- Other factors that drive sales
- Interaction effects
- External factors
 - Competition
 - Economic factors
 - Sociocultural factors

Hierarchy of effects

No **DIRECT** link between message and response.

There are steps in between. Learning stages.

3 Stages:

1. Cognitive (think)
Consumers engage in directing attention to the advertisement and thinking about it
2. Affective (feel)
Thinking gives way to emotional responses and formation of attitudes and preferences
3. Conative (do)
Behaviors that may arise - buying product

Do you think you go through those stages - just from your own life?

AIDA sequences

Hierarchy effect model from 1898

1. **A**ttention (cognitive)
2. **I**nterest and **D**esire (affective)
3. **A**ction (behavioral)

Other hierarchy effect models

1. AIDCA (Attention, interest, desire, conviction, action)
2. AIETA (Awareness, interest, evaluation, trial adoption)
3. Awareness, knowledge, liking, preference, conviction, purchase

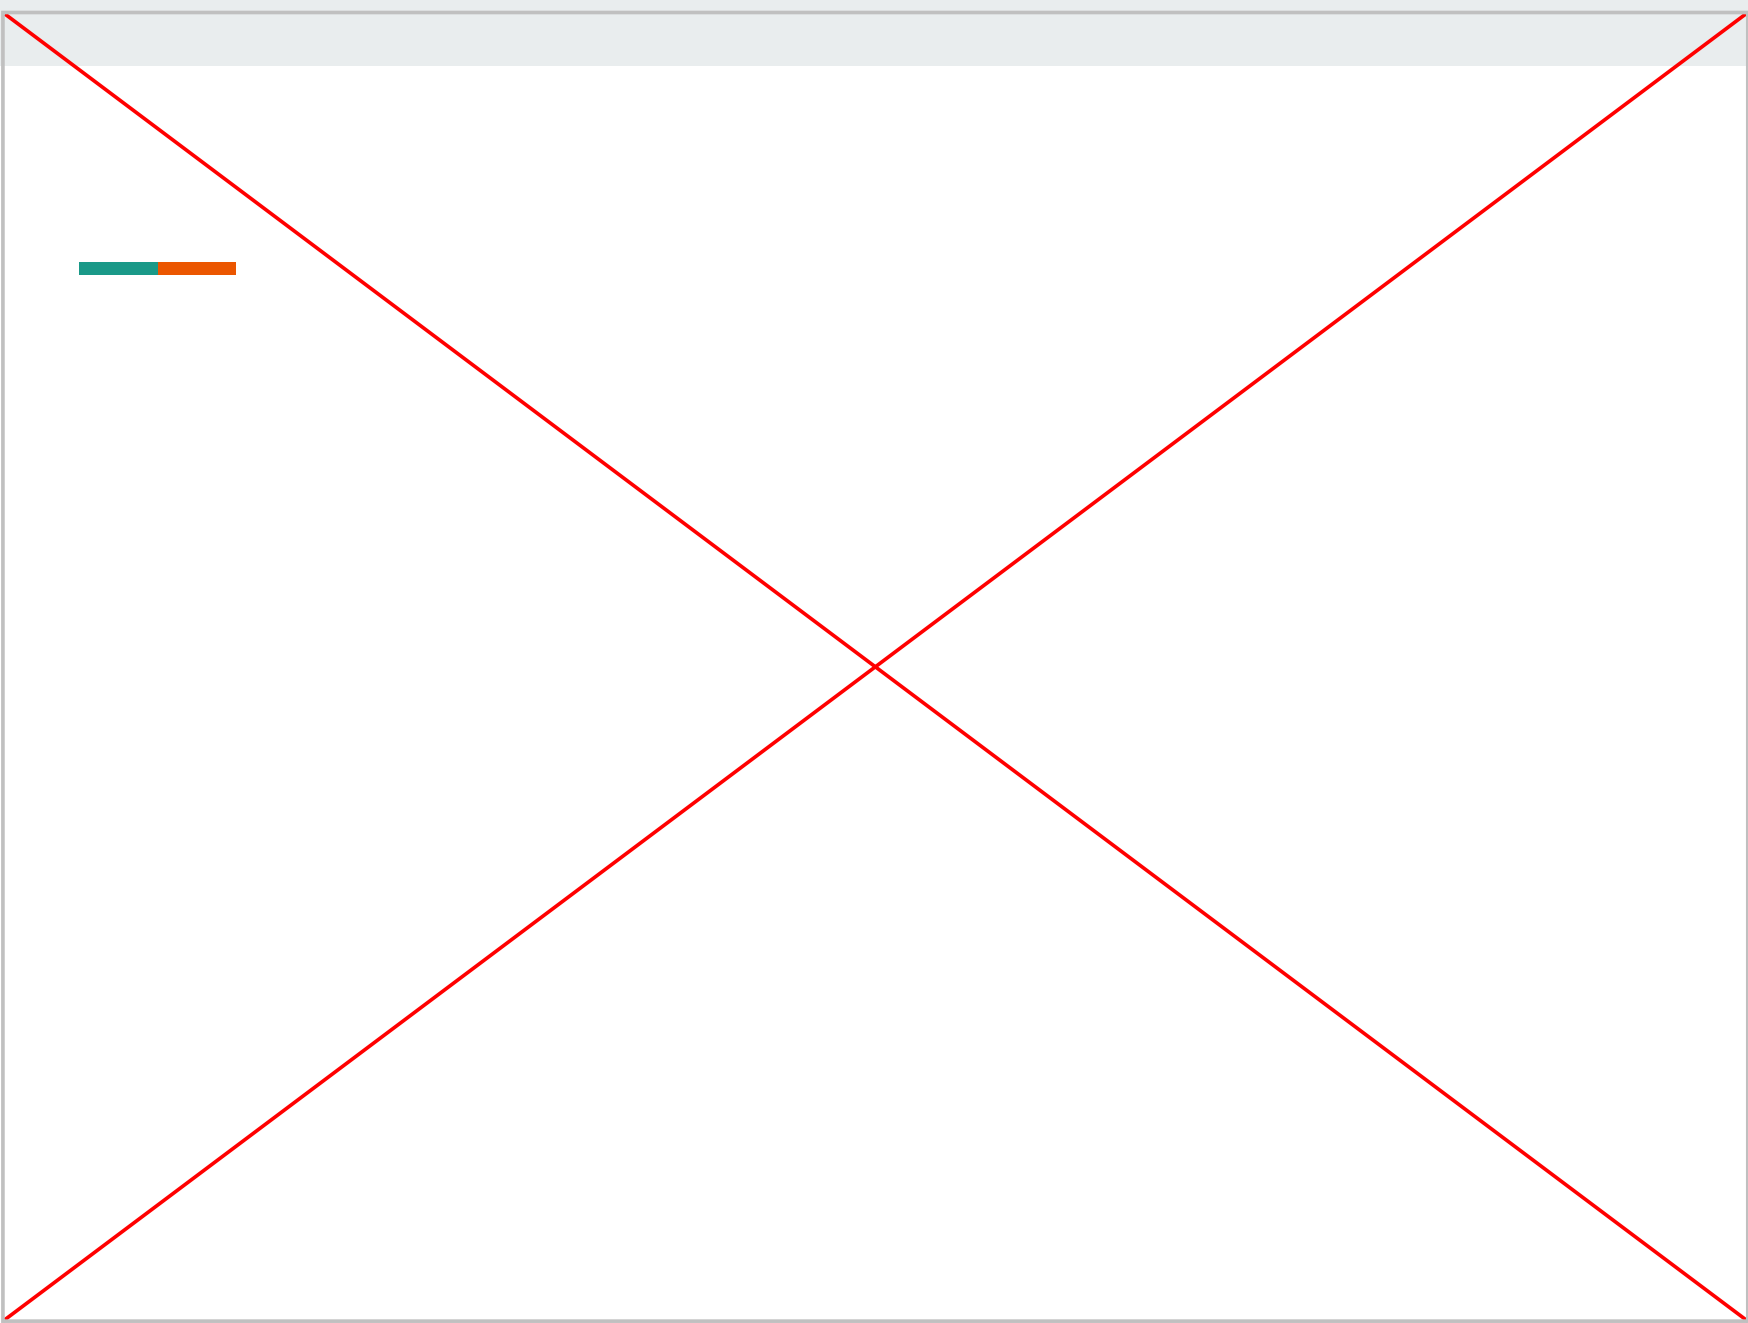

What is the problem with this?

- Sequence: think-feel-do
- High involved consumers

Foote, Cone & Belding Grid

	Thinking	Feeling
High involvement		
Low involvement		

Foote, Cone & Belding Grid

	Thinking	Feeling
High involvement		
Low involvement		

Foote, Cone & Belding Grid

Figure 4.7
The Foote,
Cone & Belding
(FCB) grid

	Thinking	Feeling
High Involvement	1. Informative (thinker) Car-house-furnishings- new products model: Learn-feel-do (economic?) Possible implications Test: Recall Diagnostics Media: Long copy format Reflective vehicles Creative: Specific information Demonstration	2. Affective (feeler) Jewelry-cosmetics- fashion apparel- motorcycles model: Feel-learn-do (psychological?) Possible implications Test: Attitude change Emotional arousal Media: Large space Image specials Creative: Executional Impact
Low Involvement	3. Habit formation (doer) Food-household items model: Do-learn-feel (responsive?) Possible implications Test: Sales Media: Small space ads 10-second I.D.s Radio; POS Creative: Reminder	4. Self-satisfaction (reactor) Cigarettes-alcohol- confectionery model: Do-feel-learn (social?) Possible implications Test: Sales Media: Billboards Newspapers POS Creative: Attention

Source: Foote, Cone & Belding

Hierarchy-of-effects models

No strong evidence that we proceed through hierarchy of effects!

Criticism:

- Sequence: think-feel-do
- High involvement consumer
- Passive consumer

Consumer behavior is too complex, focus on processes that drive consumer judgement and decision-making

Cognitive response approach

Doesn't it matter what you THINK?

Active consumer

Positive, neutral or negative thoughts

Can lead to persuasion, resistance, or unchanged position

Criticism?

Are you thoughtful and focused
on the message always?

Dual process theories

More complex responses are considered.

One side: effortful, slow, analytical

Other side, automatic, fast, implicit, impulsive

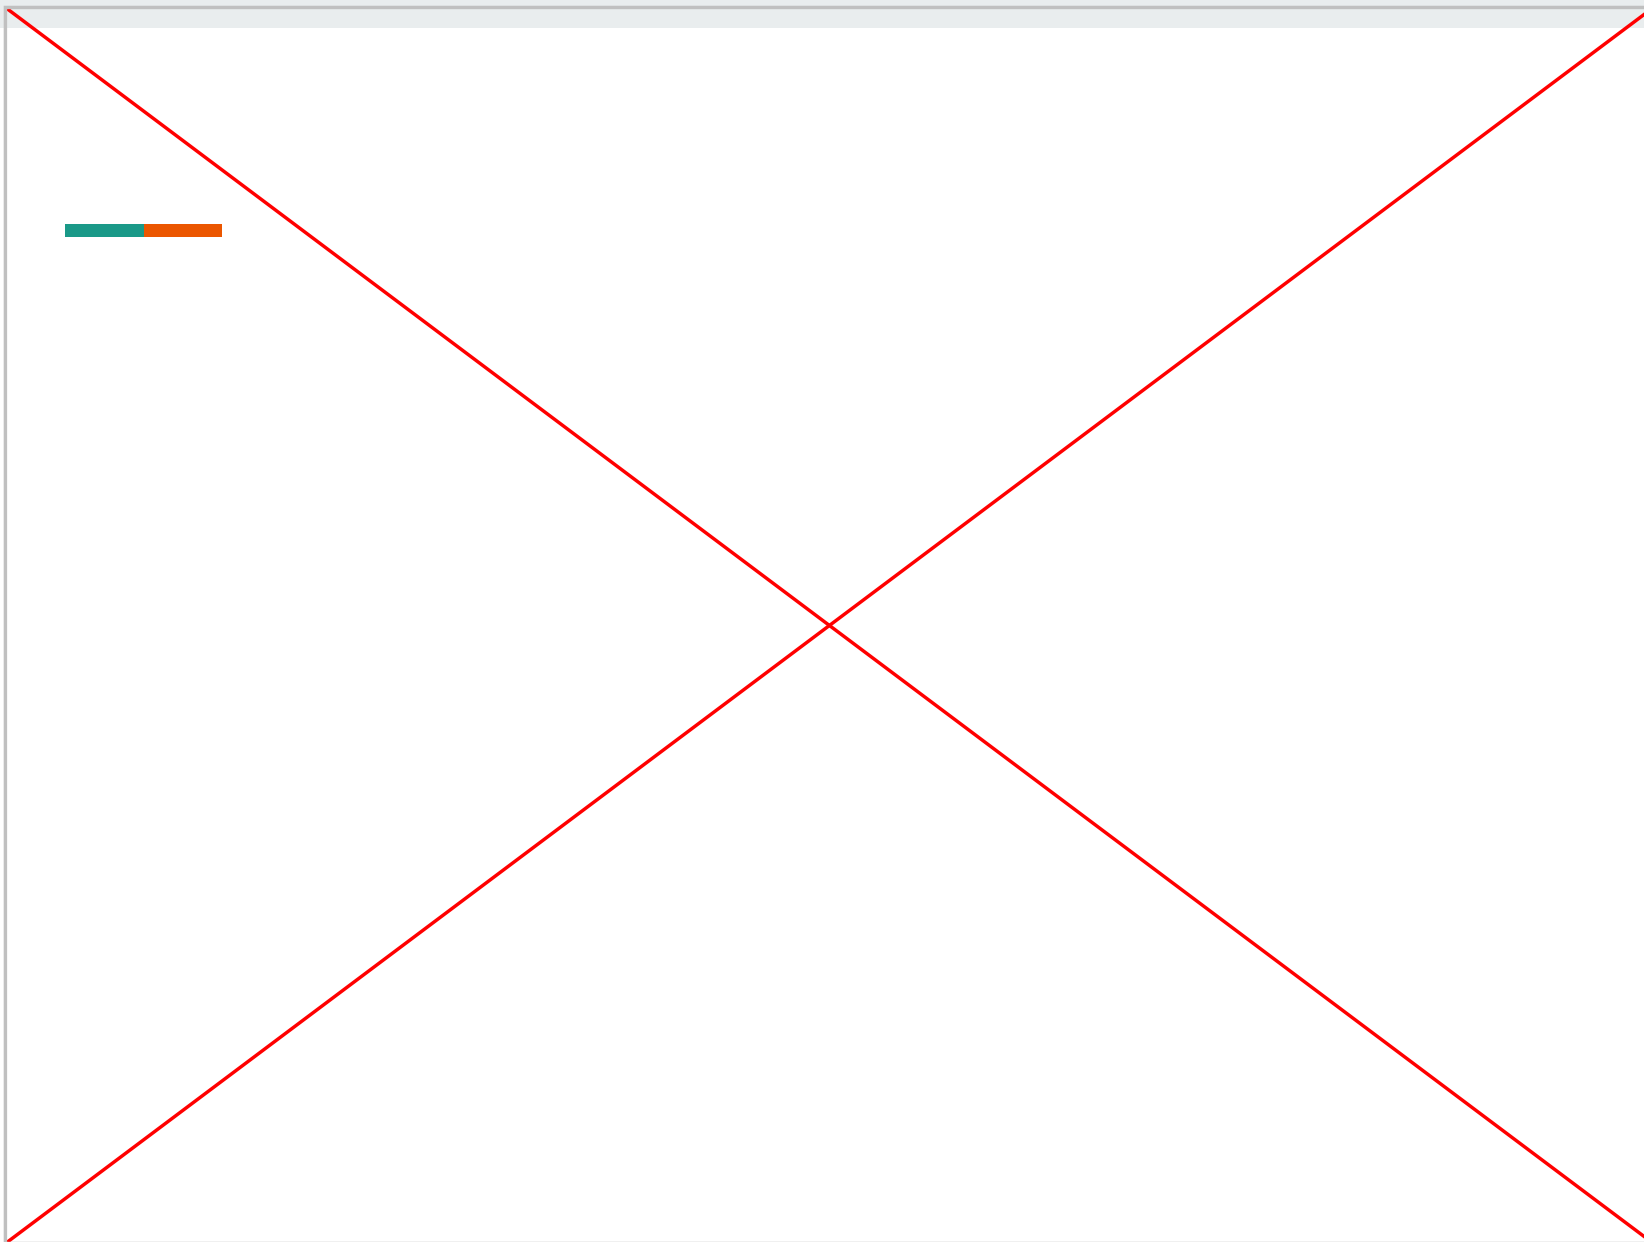

Depends on **MOTIVATION** to process the message

Ego-depletion

- Assumes we have a limited pool of mental resources to draw upon
- Assumes that when energy is low (depleted), we will have a 'drained' feeling
- When this occurs, self-control and ability to control behavior in different ways is impaired

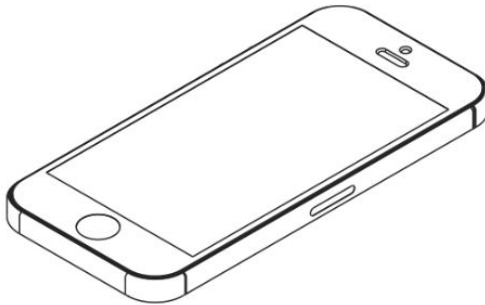

Relation to advertising?

Are ads effective?

Important to note: you are not always consciously aware

What's next?

Due by the start of Thursday's class (Jan 30, 2:30 pm):

- Submit assignment 1
 - Install LockDown browser. Do not wait until the last minute!
- Submit reading response on Chapter 1
 - Upload Word/PDF document on Canvas

We do not accept late submissions (unless you use a token).
See syllabus for more information.
