

JOUR 4251

Psychology of Advertising

2.2 Attention, perception, processing

Recap Tuesday

Sales response models

- Concave
- S-shape

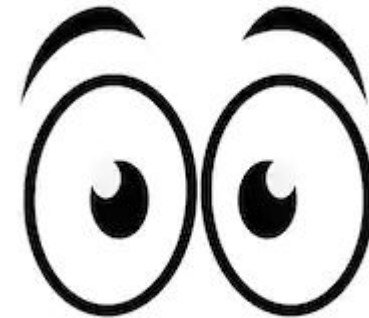

Behavioral approaches

- Hierarchy of effects models
 - AIDA
 - Foote, Cone, and Belding Grid
- Cognitive response approach
- Dual process theories
 - Effortful, slow, analytical processing
 - Fast, automatic, implicit processing
 - Ego-depletion

Stages of processing

1. Preattentive analysis
2. Focal Attention
3. Comprehension
4. Elaborative Reasoning

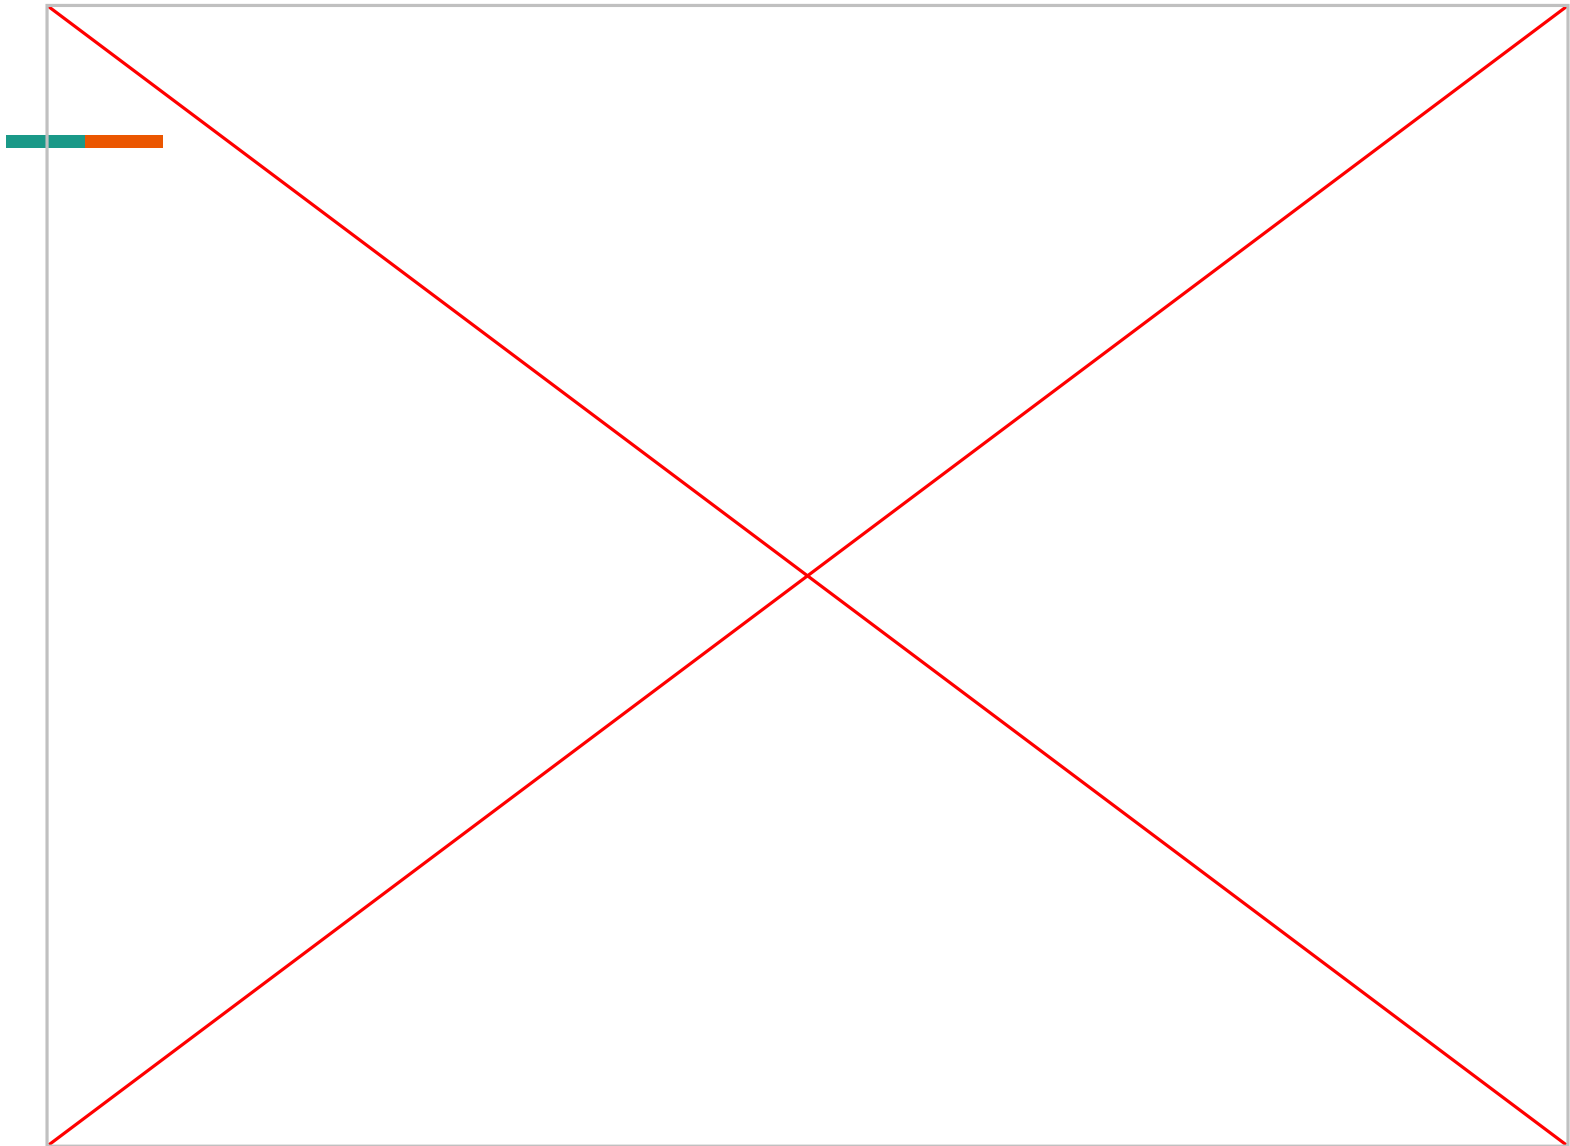

What determines that you go from one to the next stage?
Level of involvement.

Preattentive analysis

Focal attention

Comprehension

Elaborative reasoning

1. Preattentive analysis

- Involuntarily exposed to advertising
 - Flipping through a magazine, watching TV, aren't focused on it
- Stored in implicit memory
 - Nonconscious form
- Can have effects later on
 - You may later recall information about the product

1. Preattentive analysis

Feature Analysis

- Perceptual features, such as contours, shape, color etc.

Challenge?

1. Preattentive analysis

Feature Analysis

- Perceptual features, such as contours, shape, color etc.

Challenge?

Semantic Analysis

- Meaning of product: You may remember what the product does, without realizing you learned it
- You remember more when you see the product used in a familiar scene rather than in isolation

Consequence?

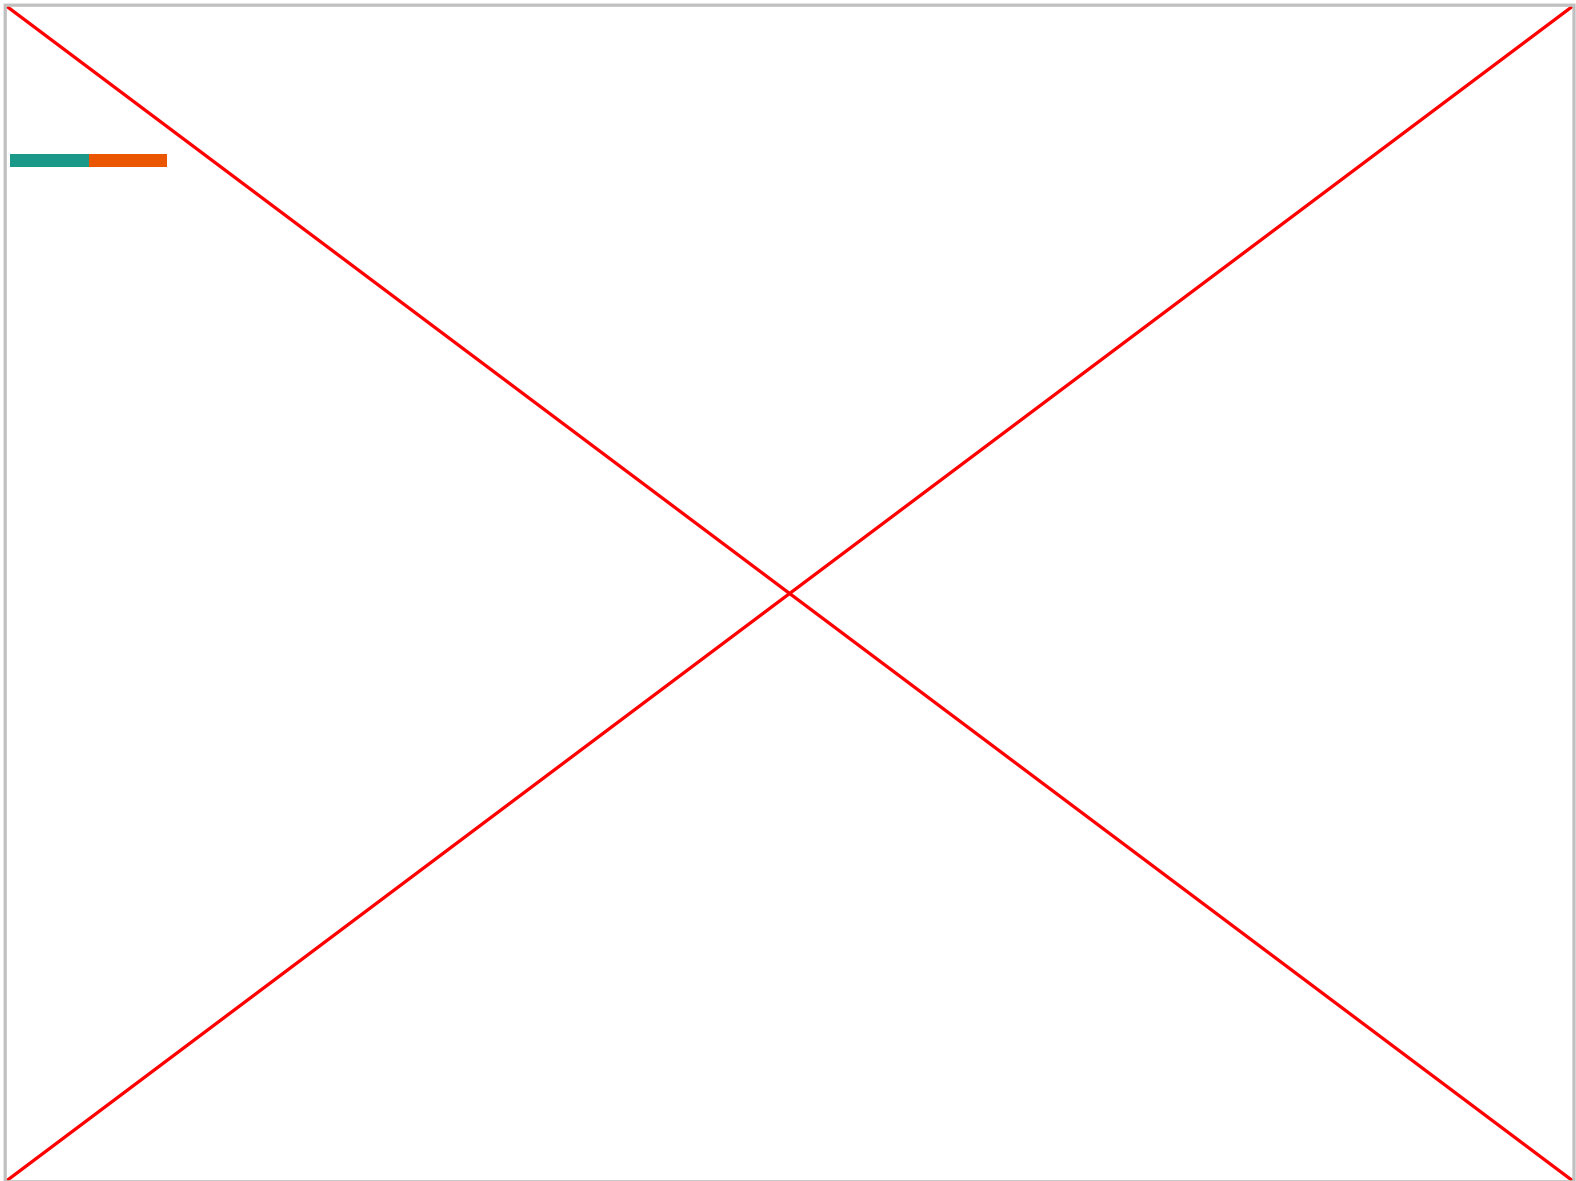

Preattentive analysis

Focal attention

Comprehension

Elaborative reasoning

Preattentive analysis

Focal attention

Comprehension

Elaborative reasoning

Hedonic fluency

1. Subjective ease with which a stimulus can be perceived and processed
2. Mildly positive emotion

Perceptual fluency

Ease with which physical features can be perceived (e.g., how bright it is)

Conceptual fluency

Ease with which conceptual meaning can be understood

Familiarity (seen it before)

Example: More repetitive songs get higher on Billboard

Preattentive analysis

Focal attention

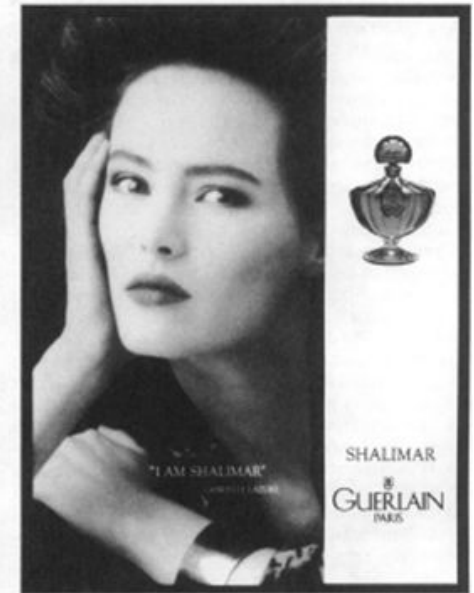

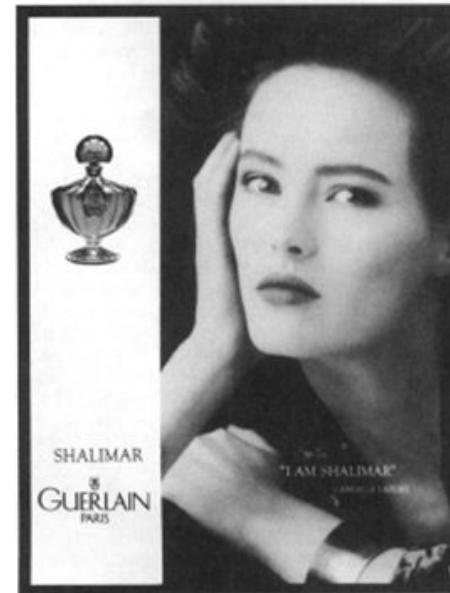

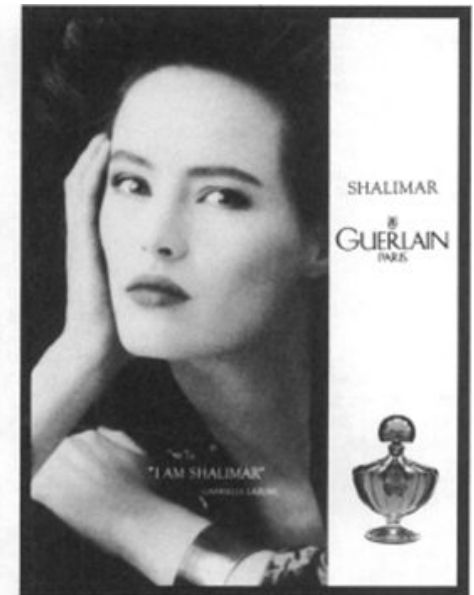

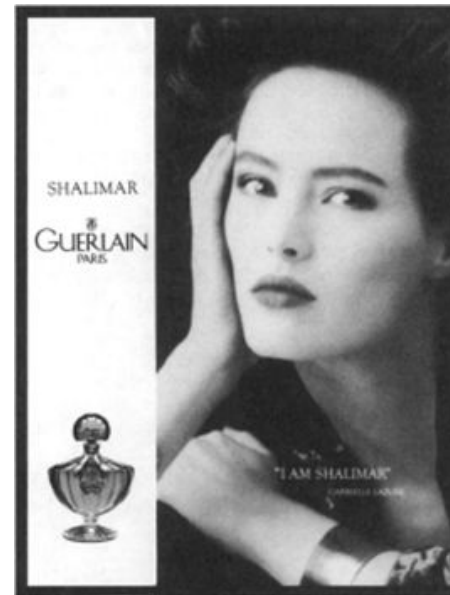

Comprehension

Elaborative reasoning

Which looks better?

Where to place
the brand name?

Matching activation

Left vs. right hemisphere of the brain

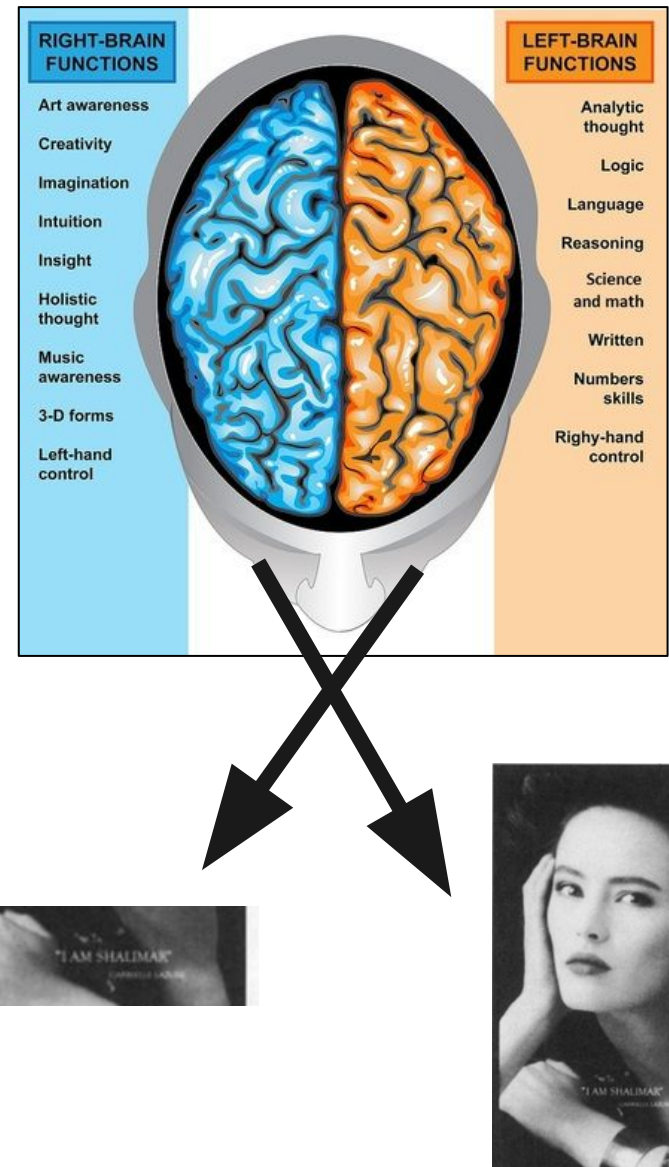

Right hemisphere

- Holistic, impressionistic processing
- Pictures

Left hemisphere

- Data-driven feature analysis
- Text

Note: simple words (e.g., brand name) can be processed with equal efficiency by either hemisphere

Matching activation hypothesis

Assumes that when one brain hemisphere is processing information, the other is activated and can process nonfocal information.

- If the name is next to the face, it needs to be on the RIGHT, and if it is next to the slogan, it needs to be on the LEFT
- They did subsequent studies to show this is the fact, not balance or other explanations

Preattentive analysis

Focal attention

Comprehension

Elaborative reasoning

Stages of processing

1. Preattentive analysis
2. Focal Attention
3. Comprehension
4. Elaborative Reasoning

2. Focal Attention

Previously, we weren't talking about conscious awareness. Now we are.

How we bring an advertisement into short-term (working) memory
- Consciously paying attention to it

WHAT HAPPENS?

WHY do you think you notice an ad and remember it?

What determines what we pay attention to?

1. Motivations
2. Salience
3. Vividness
4. Novelty

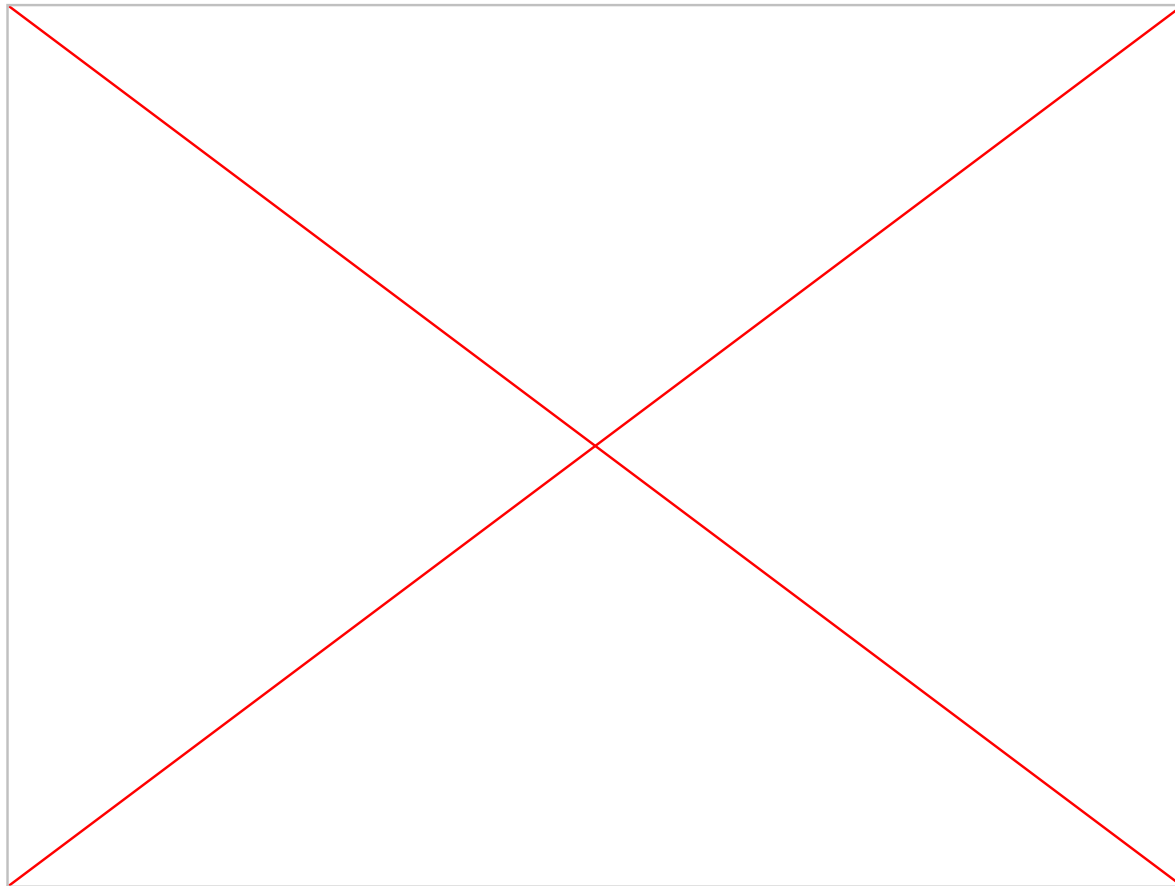

Preattentive analysis

Focal attention

Comprehension

Elaborative reasoning

Motivations

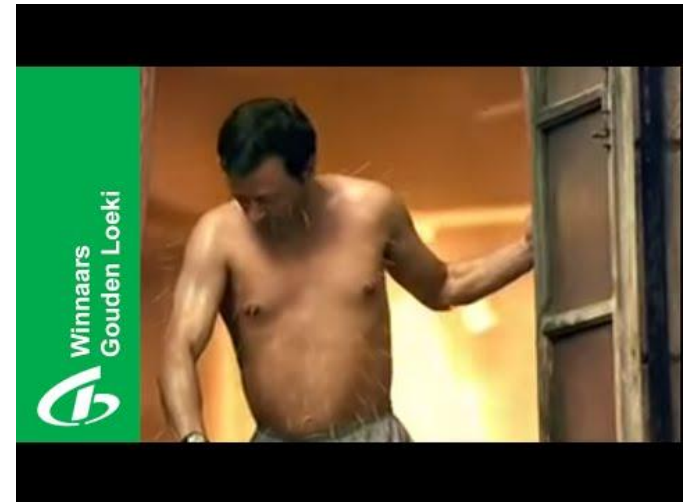

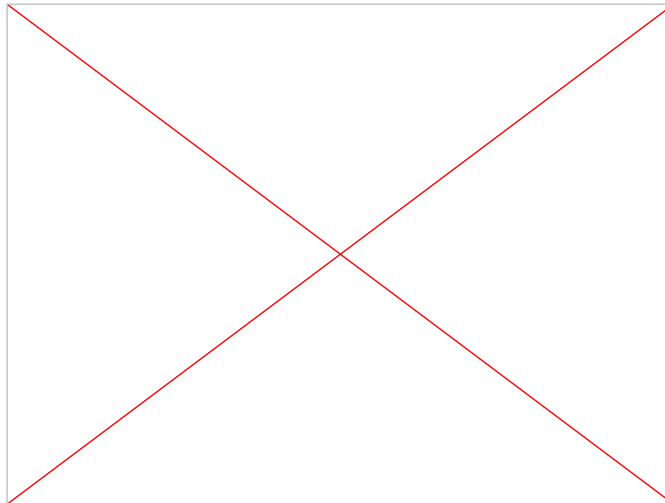

Salience

Extent to which it is noticeably different from its environment; context dependent.

- Breaks through the advertising clutter
- One technique: upward angle of the camera - makes brand bigger (figure-ground principle)
- Matters more if you are NOT motivated to process the message. If you are, then it has less of an effect

Vividness

Salience is a function of context; vividness is not fully context dependent

- Emotionally interesting
- Concrete, image-provoking
- Proximate in a temporally or spatial way

Can be in stimuli OR the recipient

More effective in persuasion in people who are high on vividness questionnaire (i.e., visual people)

What is vivid to recipient depends on his/her goals.

Preattentive analysis

Focal attention

Comprehension

Elaborative reasoning

Novelty

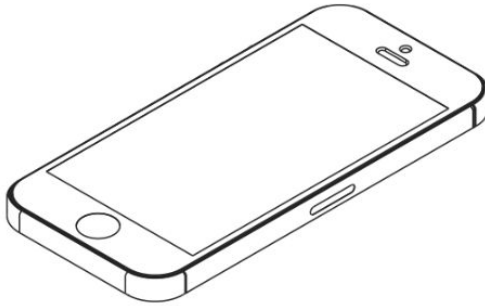

The perception of “newness”: Whether the information is unfamiliar or does not conform to expectations

Makes us THINK more - extended processing

Repetition-variation hypothesis:

Varying the advertising strategy to maintain novelty

What's next?

- Read chapter 2
 - Submit reading response by Thursday Feb 6, 2:30 pm
- Read description of assignment 2 on attention by next class
 - Explain in class on Tuesday / opportunity to ask questions
 - **Deadline: Thursday, February 13 before class starts**

Date	Topic	Reading	Deadlines (Thursdays before class)
Week 1	Jan-21 ⚡ Course introduction	Syllabus ⚡	
	Jan-23 ⚡ The functions of advertising Introduction to psychology	Start reading Chapter 1	
Week 2	Jan-28 ⚡ The functions of advertising (cont.) Introduction to psychology (cont.)	Ch. 1	Reading response #1 Assignment #1 (personal statement)
	Jan-30 Attention, perception, processing		
Week 3	Feb-04 Attention, perception, processing (cont.)	Ch. 2	Reading response #2
	Feb-06 Advertising effects on memory		
Week 4	Feb-11 Advertising effects on memory (cont.)	Ch. 3	Assignment #2 (attention) Reading response #3
	Feb-13 Attitudes toward advertising and the brand		
Week 5	Feb-18 Attitudes toward advertising and the brand (cont.)	Ch. 4	Submit review question #1 Reading response #4
	Feb-20 Attitudes toward advertising and the brand (cont.)		
Week 6	Feb-25 Review session	Catch-up with readings	
	Feb-27 EXAM 1 (in class)
