

New Research Study: Understanding American's Evaluation of media content

- **Who:** American, age 18+
- **Where:** 200 Murphy Hall
- **When:** February 3rd – 28th
 - Mondays** 10:00 am - 1:00 pm
 - Wednesdays** 10:00 am - 1:00 pm*
 - Thursdays** 9:00-11:00 am and 12:30-2:30 pm
 - Fridays** 9:00 am - 1:00**
- **What:** Watch a short video and answer questions (10 to 15 minutes)
- Take part in a study and receive \$5 in Gopher Gold or receive 2 extra credits for a JOUR course enrolled in the SONA system

The study is done by:
Dr. Claire M. Segijn, assistant professor at HSJMC, University of Minnesota
Student researcher: **Gwiwon (Jason) Nam**

Library Course Page

This course is an introduction to the underlying psychological theories and research that can explain how advertising affects people. The focus is on psychological theories over more socially oriented approaches. The goal of this course is to provide you with an understanding of a range of leading theories that can be used to evaluate the possible effects of advertising and promotional communications.

You're currently on the home page of this course. Be sure to check out these useful links:

- [Course syllabus](#) ↗
- [Course readings](#) ↗
- [Course Resources \(e.g., writing support\)](#)
- [Assignments](#)
- [How to earn extra \(research\) credit?](#)

You can also find the information by using the navigation menu on the left or by simply clicking on the links in the course schedule below.

Extra credit

Extra credit opportunities for this class **MAY** be offered as part of the Hubbard School of Journalism and Mass Communication research subjects pool project.

- Go directly to the SONA system ([click here](#) ↗)
- More information on how to enroll in the SONA system and how to participate in research can be found [here](#) ↗.

There is NO guarantee that SONA will be offered for this class. Please note that IF SONA is offered, the value of SONA points will be different than in other HSJMC classes you may have taken.

An important caveat is that your SONA points **MUST** be completed and POSTED to your SONA account by the last day our class meets.

More information on the rules and regulations related to extra credit for this class can be found in the [course syllabus](#) ↗.

Psychology of Advertising

3.1 Attention, perception, processing (Continued)

Assignment 2

Assignment #2: Attention Assignment

Flip through a magazine, newspaper or look on social media. Submit a 2-3 page (12 Times New Roman, double-spaced, approx. 500 -750 words, Word or PDF format) response that answers the following questions:

1. What were the two advertisements that captured your attention? In addition to attaching a copy, briefly describe them.
2. For EACH ad, describe why you think it was successful in capturing your attention.
3. What features, as discussed in class, made this ad attention-grabbing? You should discuss ALL FOUR methods of capturing focal attention that we discussed in class. As you can see in the rubric, you need to explain each method and how it relates to EACH ad.
4. Next, go back through and find an ad that did not capture your attention. Briefly describe the ad that did not capture your attention and attach a copy.
5. Why do you think that this ad was unsuccessful at gaining your attention?
6. What did you learn from this activity about the types of advertisements that capture your attention?

Questions?

Check grading rubric before submitting!!!

Use subheadings and paragraphs, to clearly indicate what question you are answering.

Follow guidelines to get all the points.

NOTE 3 ads in total:

- 2 successful at grabbing your attention
- 1 unsuccessful at grabbing your attention

Ass 2. Attention					
Criteria	Ratings				Pts
1. Description of adverts Are the visuals/ text thoroughly described in a clear and concise manner?	5.0 pts Yes	2.5 pts Only 1 of the 2 ads is described		0.0 pts No	5.0 pts
2. Why did YOU think it was successful? Do they describe what it is about the advertisements that grabbed their attention?	5.0 pts Yes	2.5 pts The question is only answered for 1 of the 2 ads		0.0 pts No	5.0 pts
3a. Attention-grabbing mechanism Motivations	10.0 pts Mechanism is defined and discussed in relation to each advertisement	8.0 pts Mechanism is not defined OR relation to each advertisement is not discussed OR mechanism is only discussed in relation to 1 of the 2 ads	4.0 pts Mechanism is not defined AND/OR relation to each advertisement is not discussed AND/OR mechanism is only discussed in relation to 1 of the 2 ads	0.0 pts Both the description of the mechanism as well as the relation to each advertisement is absent	10.0 pts

Reading responses (good examples)

3 Learnings:

- There are several kinds of message characteristics which include, argument based and affects based appeals which is also characterized by message sidedness. Message sidedness could be one sided and only present claims in support of the advertised position, or two sided which presents both positive and negative, or supporting and counter, arguments.
- The sales response models demonstrates that the more you spend, the less you return, resulting in a concave shape graph line which says as ad frequency goes up then so does response, however the line does even out. Some criticisms to this model include: other factors drive sales, and that at a certain point all possible audiences have been reached. This has caused other models to be formed such as the hierarchy of effects model.
- Hierarchy of effects models has different stages and the AIDA sequence created in 1998 has three stages which include (1) attention, (2) interest and desire, and (3) action. This sequence is a think, feel, do sequence and assumes highly involved customers, however motivation to process the message is important, and according to the dual processes theory will differentiate whether or not the consumer is active or passively processing the message.

• One Application:

- The knowledge of what type of product or service hard-sell and soft-sell advertising strategies are typically used for can be very useful in the industry. Knowing this, if I were to work for an advertising firm that wanted to market a product that did not have a brand and was not well-known, I would use the hard-sell approach to introduce information about the product to consumers. If the product had a brand attached to it that was relatively well-known, I would recommend using a soft-sell approach to emotionally appeal to customers' feelings about the brand and elicit an emotional response.

1 Application:

- If I were working in the advertising industry, I would use the knowledge of the different ways people may process advertisements to systematically create an ad based on the FCB grid. In this way, if I were advertising something such as toothpaste, I would know that that item tends to be a low involvement, thinking product, and I could determine which message sidedness, which strategy, and, which approach would be most beneficial for advertising and selling the product.

Recap Thursday

- Preattentive analysis
 - Feature analysis vs. semantic analysis
 - Hedonic fluency
 - Perceptual
 - Conceptual
 - Matching Activation Hypothesis
- Focal attention
 - Motivation (goal)
 - Salience
 - Vividness
 - Novelty

Preattentive analysis

Focal attention

Comprehension

Elaborative reasoning

Stages of processing

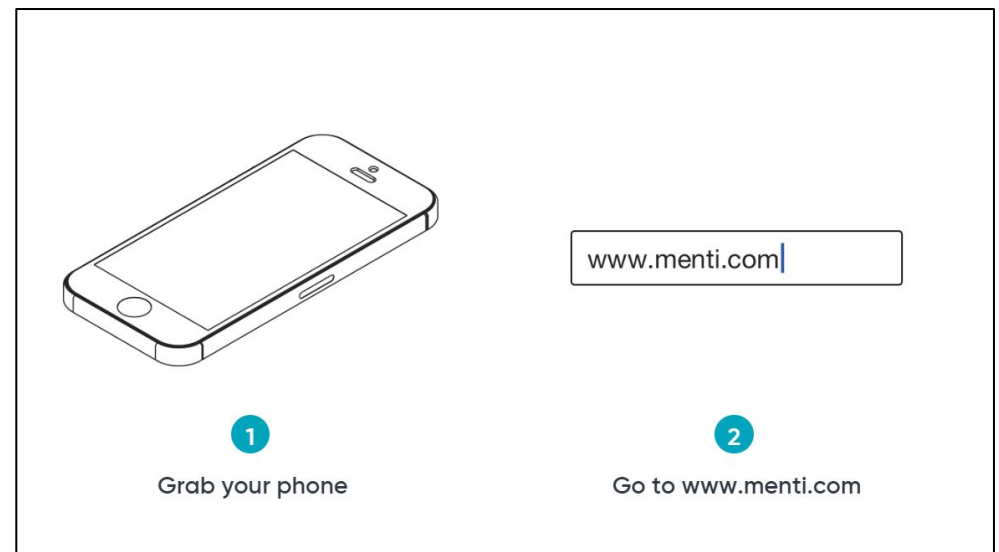

1. Preattentive analysis
2. Focal Attention
3. Comprehension
4. Elaborative Reasoning

How do we consciously process?

Categorize

- Based on existing schemas (what we already know about the world)
- Based on information provided

Enter the first word that comes to mind when you see the target word

Preattentive analysis

Focal attention

Comprehension

Elaborative reasoning

Categorization

- Car?
- Luxury Item?
- Transportation?

Brand line or product extensions
When they diversify the product line

Quickly categorized
Not plain coke, but like coke
Success depends on congruence with parent brand or
key associations

Preattentive analysis

Focal attention

Comprehension

Elaborative reasoning

Categorization

Representativeness heuristic

Extent to which two stimuli are deemed to belong to the same overall category based on shared characteristics

Pioneering advantage

Being first results in some advantages for future brands:

- 1) Novel & interesting
- 2) Define category
- 3) Direction-of-comparison effect

Categorization is NOT just where something fits

It affects our opinions

Toaster A: lots of features, high end

Toaster B: Fewer features, low end

Which is rated higher?

Depends on whether you highlight the common brand.

Preattentive analysis

Focal attention

Comprehension

Elaborative reasoning

Categorization

Assimilation

The product is associated as MORE similar than it really is to the parent category

Contrast

The product is DIFFERENTIATED from the parent company

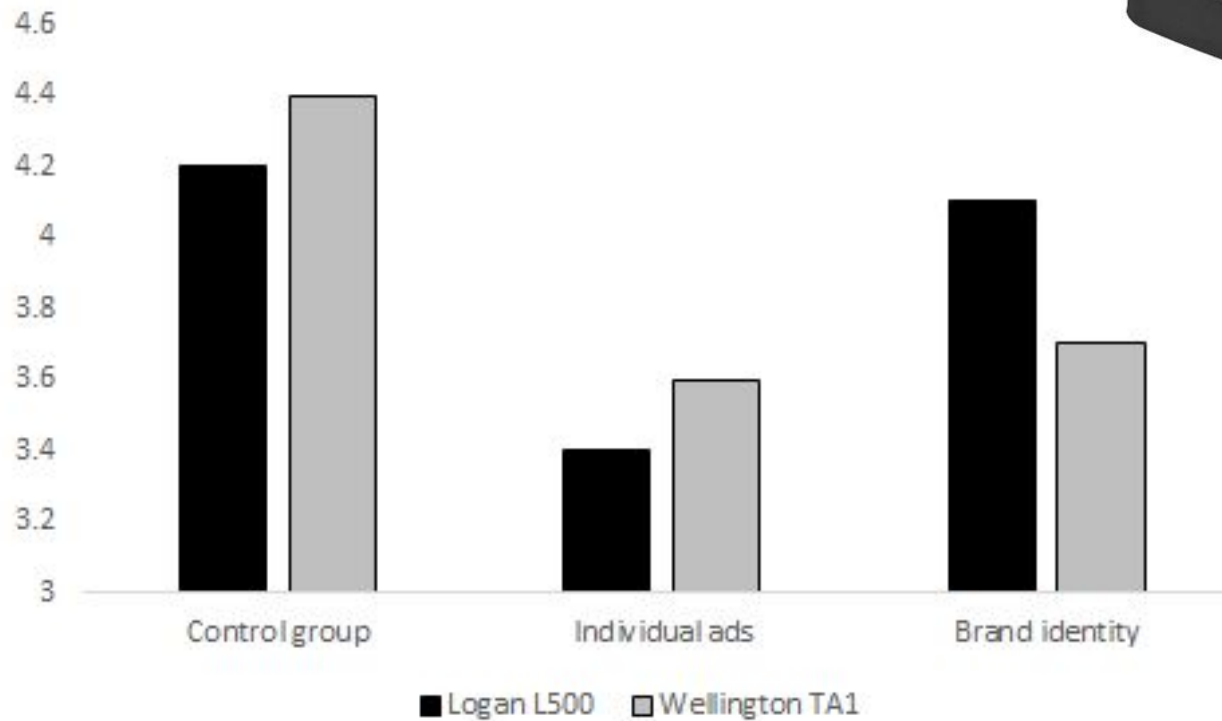

Preattentive analysis

Focal attention

Comprehension

Elaborative reasoning

Example

Preattentive analysis

Focal attention

Comprehension

Elaborative reasoning

Brand personality

Stimulus based impression formation

1. Show people images of people wearing 2 brands (Hugo Boss and Australian). In context and not in context.
2. Hugo boss in golf course; Australian in campsite
3. Rated the people wearing the clothes in **competence** the same way they rated the brand. Especially when the Hugo Boss was in golf course and Australian in campsite
4. Put them under a time crunch... Then, **ONLY** the brand, not the context guided the impressions

Preattentive analysis

Focal attention

Comprehension

Elaborative reasoning

Stages of processing

1. Preattentive analysis
2. Focal Attention
3. Comprehension
4. Elaborative Reasoning

Preattentive analysis

Focal attention

Comprehension

Elaborative reasoning

Comprehension

Do you generally understand advertisements?

Can you think of a time you didn't understand an advertisement?

Comprehension

- 80% of advertisements are misunderstood in some way
- **Truth effect:** We accept information, even if we don't quite understand it. Harder to reject than accept a claim. Takes more work.
- **Sleeper effect:** The more you see/hear a claim, the more true it seems. It's familiar, and you just assume it's true.
- **Inferences:** We fill in the blanks. Comparisons are not always clear.

Preattentive analysis

Focal attention

Comprehension

Elaborative reasoning

Strategies to muddy comprehension

Omit comparisons: “Dentists recommend Trident” => Over what? Eating chocolate bars?

Pragmatic inferences: “Brand X may be the best beer in the world” => well yeah, and Brand X may also be the worst. It isn’t false, but it isn’t maybe true.

Juxtaposition: “Be cool, buy brand X” => suggest a causal relationship ($A=B$)

Affirmation of the consequent: “if you can see it, you can make it: Brand X” => reverse cause and effect ($B \Rightarrow A$ vs. $A \Rightarrow B$)

Preattentive analysis

Focal attention

Comprehension

Elaborative reasoning

maybelline.com

MAYBE

MAYBE SHE'S BORN WITH IT. MAYBE IT'S MAYBELLINE!

Adriana is wearing New ShineReduction™ Glossy Lipcolor in Beamingly Berry. ©2007 Maybelline LLC, D&B.

Preattentive analysis

Focal attention

Comprehension

Elaborative reasoning

Stages of processing

1. Preattentive analysis
2. Focal Attention
3. Comprehension
4. Elaborative Reasoning

Elaborative reasoning

HIGH involvement (motivated!)

Process by which the advertisement is actively related to previously stored knowledge and allows for simple OR more complex inferences.

THINKING

- Extent of the thinking - How much?
- Valence of the thinking - how positive?
- Object of the thinking - product, competitor?

Motivations to elaborate

SELF SCHEMA

“I am pro-environment!” Makes you motivated to process a message if it is about the environment

You process more elaboratively when the product message **MATCHES** your self-schema. “This is a message for me”.

Preattentive analysis

Focal attention

Comprehension

Elaborative reasoning

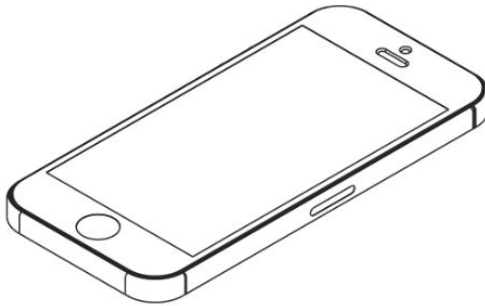

Metacognition

Thinking about thinking

The person doesn't think about the product, they think about themselves

Think about their own judgment "am I falling for this?"

Self-validation: Consumers need confidence their decision is good.

What's next?

- Submit reading response on Chapter 2
 - Due Feb 6 (Thursday) before class starts (2:30 pm)!
 - Hand in on Canvas: upload Word/PDF document
- Start reading Chapter 3 (after handing in reading response)
 - We will start talking about memory on Thursday
- Start making assignment 2 (attention)
 - Due Feb 13 before class starts!
 - Hand in on Canvas: Upload PDF document + photos/copies of the ads
- Let us know whether you need a laptop for Exam 1 (Feb 27)
 - Email your TA by Feb 13
