

JOUR 4251

Psychology of Advertising

4.2 Attitudes

Recap Tuesday

- Baddeley & Hitch Model of working (short-term) memory
 - Central executive
 - Phonological loop
 - Visuospatial sketchpad
 - Episodic buffer
- Long term memory
 - Explicit memory
 - Semantic vs. episodic
 - Implicit memory
 - Priming
 - supraliminal vs. subliminal
 - Knowledge structures
 - Categories, scripts, networks (nodes & links)
- Forgetting the message

What is an attitude?

1. Evaluative responses

“Attitude is a psychological tendency that is expressed by evaluating a particular entity with some degree of favour or disfavour” (Eagly and Chaiken, 1993)

What is an attitude?

2. Directed to an attitude object

What is an attitude?

3. Derived from 3 classes of information:

1. Cognitive
 - Based on information
2. Affective
 - Based on feelings, emotions, mood
3. Behavioral
 - Based on behavior

Self-perception theory

We infer our attitudes from our own behavior.

How often do you drink Pepsi?

- Frequent? You must like it!
- Never? You must not like it.

What do you think?

Attitudes are a(n)?

1. Predisposition to evaluate
2. Evaluative response in itself

Attitudes are...?

1. Stable over time
2. Context dependent

Explicit versus implicit attitudes

Explicit attitudes

- Evaluations of which the individual is consciously aware

Implicit attitudes

- Individual is not aware they have these attitudes.
- They influence reactions over which the individual has no control.

Measuring attitudes

To what extent do you believe brand X is...

Positive 0 0 0 0 0 0 0 Negative

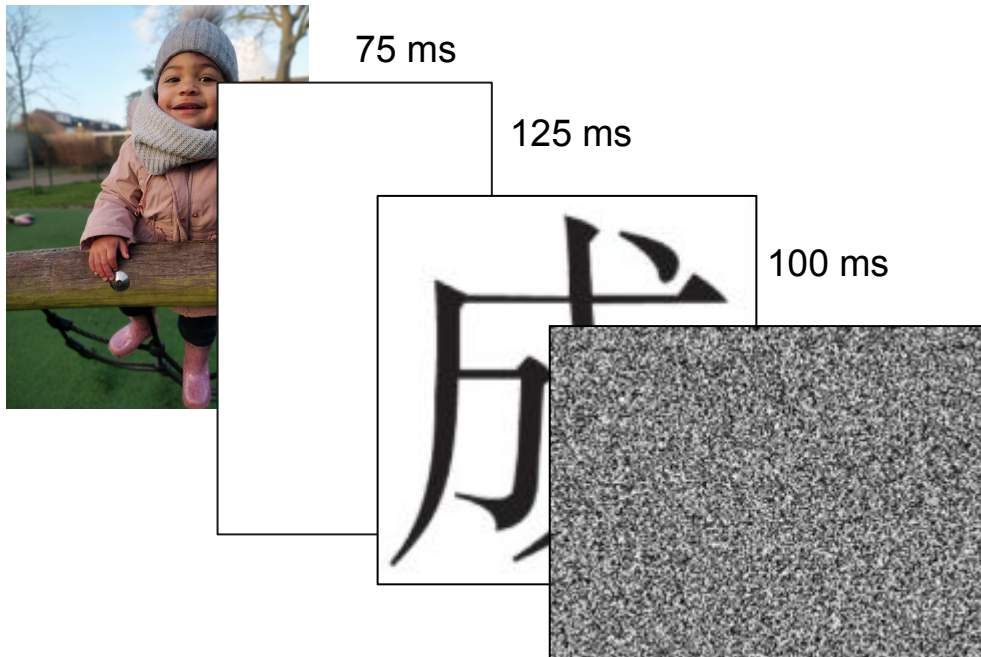

Good 0 0 0 0 0 0 0 Bad

Interesting 0 0 0 0 0 0 0 Not interesting

Valuable 0 0 0 0 0 0 0 Not valuable

Measuring attitudes

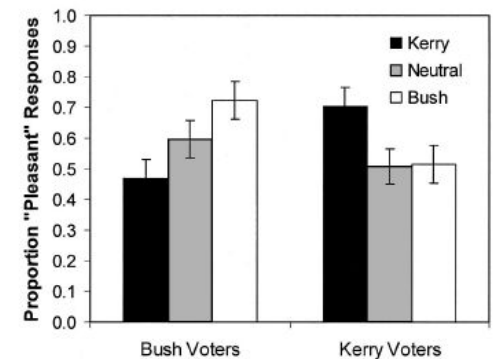

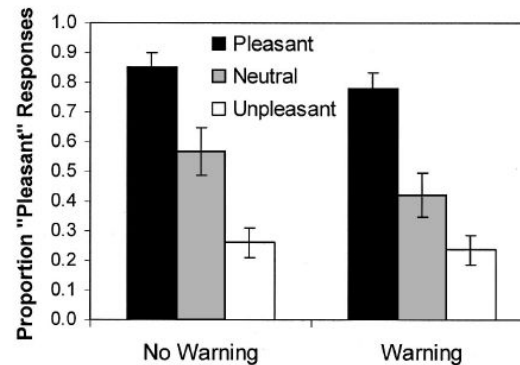

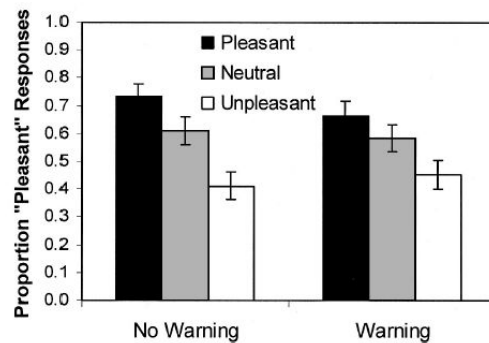

Affect misattribution procedure (AMP)

Instructions:

- Flashing pictures, first one being a real-life image, second Chinese character
- Real-life image simply serves as a warning signal
- Judge visual pleasantness of Chinese character
- Two keys (pleasant vs. unpleasant)
- As quickly as possible

Measuring attitudes

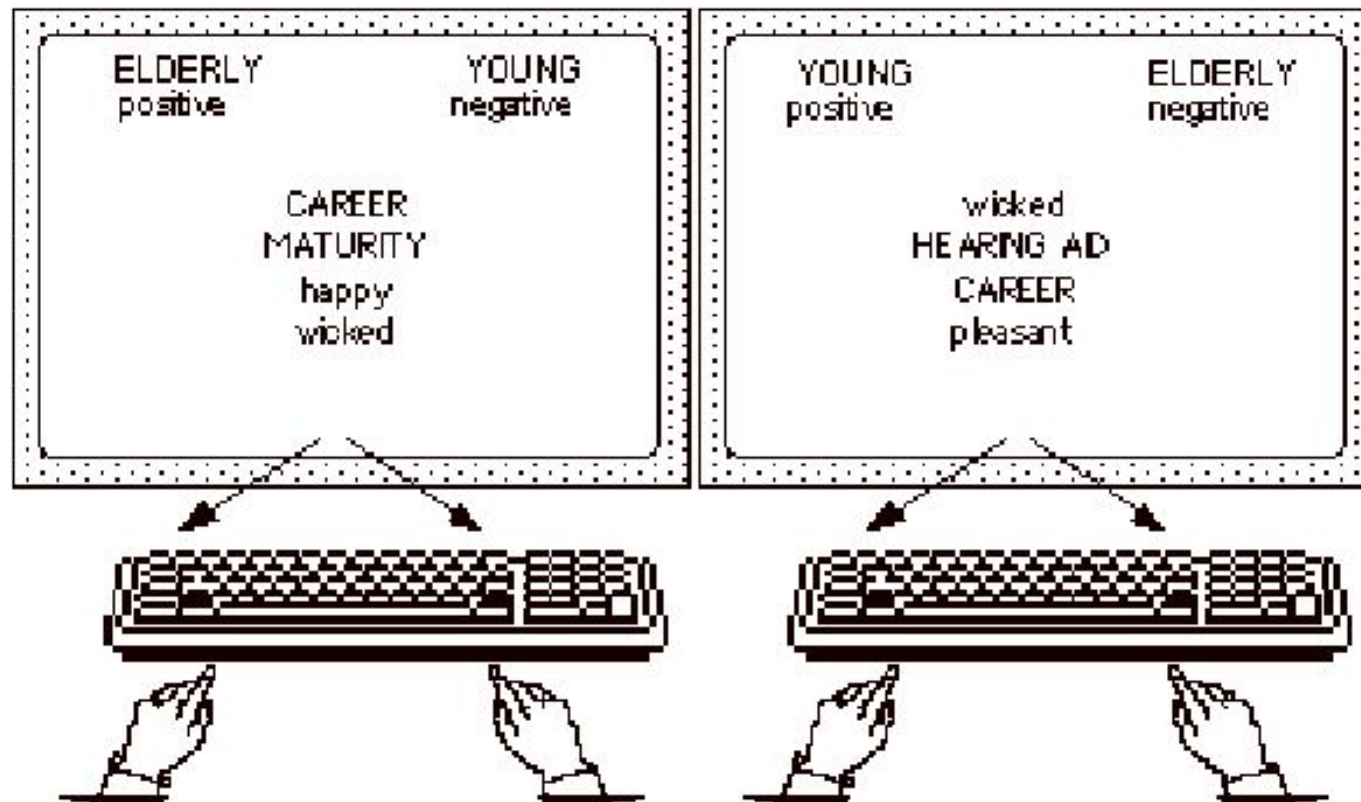

Warning:

Sometimes, the photographs presented prior to the Chinese characters can bias your responses on those characters. Thus, please try to make sure that your responses are not influenced by the photographs.

It is important to note that having just seen a positive image can sometimes make you judge the drawing more positively than you otherwise would. Likewise, having just seen a negative image can make you judge the drawing more negatively. Because we are interested in studying how people can avoid being biased, please try your absolute best not to let the real-life images bias your judgment of the drawings! Give us an honest assessment of the drawings, regardless of the images that precede them.

Implicit-association test (IAT)

Implicit-association test (IAT)

Implicit Association Test

Next, you will use the 'E' and 'I' computer keys to categorize items into groups as fast as you can. These are the four groups and the items that belong to each:

Category	Items
Male	Man, Son, Father, Boy, Uncle, Grandpa, Husband, Male
Female	Mother, Wife, Aunt, Woman, Girl, Female, Grandma, Daughter
Science	Astronomy, Math, Chemistry, Physics, Biology, Geology, Engineering
Liberal Arts	History, Arts, Humanities, English, Philosophy, Music, Literature

There are seven parts. The instructions change for each part. Pay attention!

Continue

Implicit-association test (IAT)

Press "E" for
Liberal Arts

Press "I" for
Science

Press "E" for
Male

Press "I" for
Female

Press "E" for
Male
or
Liberal Arts

Press "I" for
Female
or
Science

Press "E" for
Science

Press "I" for
Liberal Arts

Press "E" for
Male
or
Science

Press "I" for
Female
or
Liberal Arts

Put a left
Put a right
Items will

If you make a mistake, a red X will appear. Press the other key to continue.

Go as fast as you can while being accurate.

Put a left finger
Put a right finger

If you make a mistake, a red X will appear. Press the other key to continue.

Go as fast as you can while being accurate.

Use the **E** key for **Liberal Arts**
Use the **I** key for **Science**
Each item belongs to only one category.

If you make a mistake, a red X will appear. Press the other key to continue.

Go as fast as you can while being accurate.

Watch out, the labels have changed!
Use the left finger on the **E** key
Use the right finger on the **I** key

Go as fast as you can while being accurate.

Part 6 of 7

Use the **E** key for **Science** and for **Male**.
Use the **I** key for **Liberal Arts** and for **Female**.
Each item belongs to only one category.

If you make a mistake, a red X will appear. Press the other key to continue.

Go as fast as you can while being accurate.

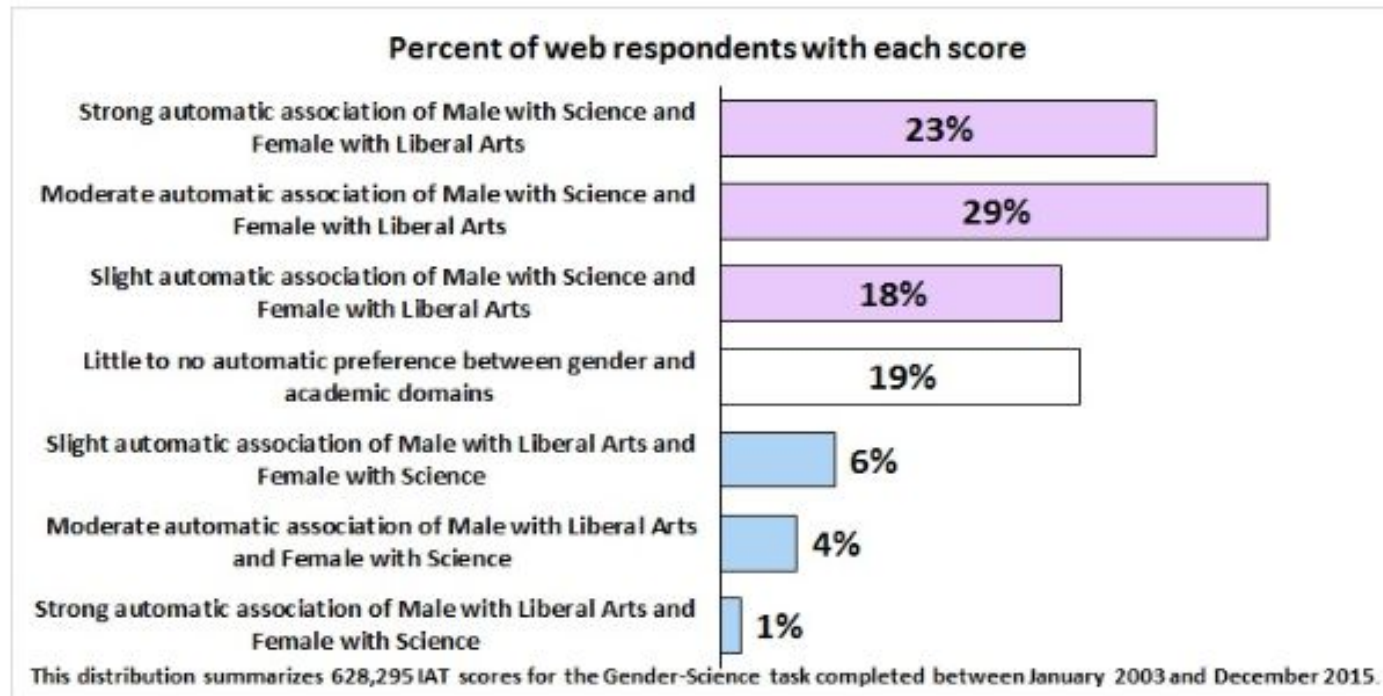

Press the **space bar** when you are ready to start.

Implicit-association test (IAT)

The sorting test you just took is called the Implicit Association Test (IAT). You categorized Male and Female words with Science and Liberal Arts.

During the IAT you just completed:

Your responses suggested a moderate automatic association for Male with Science and Female with Liberal Arts.

Explicit vs. implicit measures

Which one should you use?

	Conscious process	Nonconscious process
Explicit measure	A	B
Implicit measure	C	D

Video

Think about the following three questions:

- 1) How might this research be relevant to advertisers?
- 2) Why might advertisers be interested in implicit attitudes more generally?
- 3) What other kinds of implicit attitudes might advertisers be interested in testing?

Video

Think about the following three questions

- 1) How might this research be relevant to advertisers?
- 2) Why might advertisers be interested in implicit attitudes more generally?
- 3) What other kinds of implicit attitudes might advertisers be interested in testing?

Take the test yourself

Native IAT	<i>Native American</i> ('Native - White American' IAT). This IAT requires the ability to recognize White and Native American faces in either classic or modern dress, and the names of places that are either American or Foreign in origin.
Sexuality IAT	<i>Sexuality</i> ('Gay - Straight' IAT). This IAT requires the ability to distinguish words and symbols representing gay and straight people. It often reveals an automatic preference for straight relative to gay people.
Age IAT	<i>Age</i> ('Young - Old' IAT). This IAT requires the ability to distinguish old from young faces. This test often indicates that Americans have automatic preference for young over old.
Disability IAT	<i>Disability</i> ('Disabled - Abled' IAT). This IAT requires the ability to recognize symbols representing abled and disabled individuals.
Weapons IAT	<i>Weapons</i> ('Weapons - Harmless Objects' IAT). This IAT requires the ability to recognize White and Black faces, and images of weapons or harmless objects.
Gender-Career IAT	<i>Gender - Career</i> . This IAT often reveals a relative link between family and females and between career and males.
Asian IAT	<i>Asian American</i> ('Asian - European American' IAT). This IAT requires the ability to recognize White and Asian-American faces, and images of places that are either American or Foreign in origin.
Skin-tone IAT	<i>Skin-tone</i> ('Light Skin - Dark Skin' IAT). This IAT requires the ability to recognize light and dark-skinned faces. It often reveals an automatic preference for light-skin relative to dark-skin.
Presidents IAT	<i>Presidents</i> ('Presidential Popularity' IAT). This IAT requires the ability to recognize photos of Donald Trump and one or more previous presidents.
Arab-Muslim IAT	<i>Arab-Muslim</i> ('Arab Muslim - Other People' IAT). This IAT requires the ability to distinguish names that are likely to belong to Arab-Muslims versus people of other nationalities or religions.
Gender-Science IAT	<i>Gender - Science</i> . This IAT often reveals a relative link between liberal arts and females and between science and males.
Religion IAT	<i>Religion</i> ('Religions' IAT). This IAT requires some familiarity with religious terms from various world religions.
Race IAT	<i>Race</i> ('Black - White' IAT). This IAT requires the ability to distinguish faces of European and African origin. It indicates that most Americans have an automatic preference for white over black.

Link is included in the notes of the slides.

Explicit vs. implicit measures

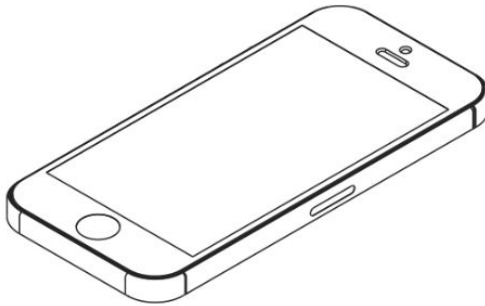

Be careful in interpreting results. Two problems:

- 1) You may find something that isn't really there
- 2) You may ignore existing results

What do the results tell us?

	No explicit effect	Explicit effect
No implicit effect	I	II
Implicit effect	III	IV

What's next?

- Continue reading Chapter 4 (attitudes)
 - Submit reading response **by Feb 20 before class starts**
- Exam 1 will be on February 27
 - In class, bring your own laptop (unless you told us)
- We will have a review session on February 25 (Tuesday)
 - **Submit review question by Feb 20** (12.5 points for participation/engagement)
 - Submit a question on **content!** What needs additional clarification.
 - NOT: do we need to know the brands of the ads shown in class?
 - NOT: do we need to know specific experiments?
 - I will go over that in the review session anyway (the answer is no).
