An annuity is intended to be a long-term, tax-deferred retirement vehicle. Earnings are taxable as ordinary income when distributed, and if withdrawn before age 59½, may be subject to a 10% federal tax penalty. If the annuity will fund an IRA or other tax qualified plan, the tax deferral feature offers no additional value. Qualified distributions from a Roth IRA are generally excluded from gross income, but taxes and penalties may apply to non-qualified distributions. Please consult a tax advisor for specific information. There are charges and expenses associated with annuities, such as deferred sales charges for early withdrawals. Variable annuities have additional expenses such as mortality and expense risk, administrative charges, investment management fees and rider fees. The variable subaccounts of variable annuities are subject to market fluctuation, investment risk and loss of principal.

The guarantees are subject to the financial strength and claims-paying ability of the issuing insurance company. The guarantees have no bearing on the variable investment performance.

Obligations to make payments under the Products are solely the obligation of Licensee. The selection of the Index as a crediting option under a Products does not obligate Licensee or Société Générale to invest annuity payments in the components of the Index.

In calculating the performance of the Index, SG deducts a maintenance fee of 0.50% per annum on the level of the Index, and fixed transaction and replication costs, each calculated and deducted on a daily basis. The transaction and replication costs cover, among other things, rebalancing and replication costs. The total amount of transaction and replication costs is not predictable and will depend on a number of factors, including the leverage of the Index, which may be as high as 200%, the performance of the indexes underlying the Index, market conditions and the changes in the market environments, among other factors. The transaction and replication costs, which are increased by the Index's leverage, and the maintenance fee will reduce the potential positive change in the Index and increase the potential negative change in the Index. While the volatility control applied by the Index may result in less fluctuation in rates of return as compared to indices without volatility controls, it may also reduce the overall rate of return as compared to products not subject to volatility controls.
